

## Basic information

**2021/0218(COD)**

COD - Ordinary legislative procedure (ex-codecision procedure)  
Directive

Renewable Energy Directive

Amending Directive 98/70/EC [1996/0163\(COD\)](#)  
Amending Regulation 2018/1999 [2016/0375\(COD\)](#)  
Amending Directive 2018/2001 [2016/0382\(COD\)](#)

### Subject

3.60.05 Alternative and renewable energies

### Legislative priorities

[Joint Declaration 2021](#)  
[Joint Declaration 2022](#)  
[Joint Declaration 2023-24](#)

Procedure completed

## Key players

European  
Parliament

Committee responsible	Rapporteur	Appointed

## Renewable Energy Directive

2021/0218(COD) - 14/07/2021 - Legislative proposal

**PURPOSE:** to amend existing legislation on the promotion of energy from renewable sources in the light of the EU's climate ambition.

**PROPOSED ACT:** Directive of the European Parliament and of the Council.

**ROLE OF THE EUROPEAN PARLIAMENT:** the European Parliament decides in accordance with the ordinary legislative procedure and on an equal footing with the Council.

**BACKGROUND:** renewable energy plays a fundamental role in delivering the European Green Deal and for achieving climate neutrality by 2050, given that the energy sector contributes over 75% of total greenhouse gas emissions in the EU. By reducing those greenhouse gas emissions, renewable energy also contributes to tackling environmental-related challenges such as biodiversity loss.

Directive (EU) 2018/2001 (Renewable energy Directive II - RED II) sets a binding Union target to reach a share of at least 32 % of energy from renewable sources in the Union's gross final consumption of energy by 2030. Under the Climate Target Plan, the share of renewable energy in gross final energy consumption would need to increase to 40% by 2030 in order to achieve the Union's greenhouse gas emissions reduction target. Therefore, the target needs to be increased.

The European Green Deal launched a new growth strategy for the EU that aims to transform the EU into a fair and prosperous society, with a modern, resource-efficient and competitive economy. The '[European Climate Law](#)' has made the EU's climate neutrality target by 2050 legally binding.

The Commission has presented a **complementary and interconnected set of proposals as part of the 2030 Climate and Energy 'Fit for 55' package** to achieve the greenhouse gas emission reduction target of **at least 55% compared to 1990**. This 'Fit for 55' legislative package is the most comprehensive building block in the efforts to implement the ambitious new 2030 climate target, and all economic sectors and policies will need to make their contribution.

**CONTENT:** the proposed revision of the Renewable Energy Directive aims to raise the production target so that the **share of energy from renewable sources reaches 40% by 2030**. All Member States will contribute to this target, and specific targets are proposed for the use of renewable energy in transport, heating and cooling systems, buildings and industry.

The main changes are as follows:

### ***Strengthening the renewable energy target***

The proposal requires fuel suppliers to ensure that the amount of renewable fuels and renewable electricity supplied to the **transport sector** leads to a reduction in greenhouse gas intensity of **at least 13% by 2030**. It also provides for a mandatory annual increase of 1.1 percentage points for the use of renewable energy in the **heating and cooling sector** at national level.

In addition, the proposal sets an indicative target for **industry** (1.1 percentage point annual increase in the use of renewable energy) and a new EU indicative target of 49% renewable energy in buildings by 2030.

In line with the ambition of the EU hydrogen strategy, the proposal also raises the ambition level for **advanced biofuels** to 2.2% of transport energy consumption and introduces a 2.6% target for hydrogen and synthetic hydrogen fuels in the sector.

#### ***Promoting the deployment of and investment in renewable energy***

In line with the EU's strategy for the integration of the energy system, the proposal introduces measures to **develop electrification**, including a credit mechanism for transport. The measures include:

- setting up an EU-wide certification scheme for renewable fuels (including hydrogen)
- facilitating purchase agreements for electricity from renewable sources;
- speeding up the authorisation of renewable energy projects;
- promote cross-border cooperation, including through the Renewable Energy Financing Facility.

#### ***Sustainable bioenergy***

In line with the EU Biodiversity Strategy, the proposal **strengthens the EU's sustainability criteria** for the use of bioenergy and also provides for specific biodiversity and climate safeguards for forest biomass.

In particular, the proposal:

- bans the sourcing of biomass for energy production from primary forests, peatlands and wetlands;
- specifies sustainability criteria for harvesting and maintaining soil quality and biodiversity;
- promotes the use of biomass according to its highest economic and environmental added value (cascading);
- prohibits national financial incentives which support the use of saw logs, veneer logs (high quality wood), and stumps and roots (that are important for the soil) for energy generation;
- requires all biomass heat and power installations to meet minimum greenhouse gas emission reduction thresholds;
- requires the application of EU sustainability criteria to smaller heat and power plants (5 MW or more).

## **Renewable Energy Directive**

2021/0218(COD) - 18/07/2022 - Committee report tabled for plenary, 1st reading/single reading

The Committee on Industry, Research and Energy adopted the report by Markus PIEPER (EPP, DE) on the proposal for a directive of the European Parliament and of the Council amending Directive (EU) 2018/2001 of the European Parliament and of the Council, Regulation (EU) 2018/1999 of the European Parliament and of the Council and Directive 98/70/EC of the European Parliament and of the Council as regards the promotion of energy from renewable sources, and repealing Council Directive (EU) 2015/652.

The committee responsible recommended that the European Parliament's position adopted at first reading under the ordinary legislative procedure should amend the proposal as follows:

#### ***Binding overall EU target for 2030***

Member States should collectively ensure that the share of energy from renewable sources in the Union's gross final energy consumption in 2030 is at least 45%. Each Member State should set an indicative target of at least 5% of newly installed renewable energy capacity between the date of entry into force of the Directive and 2030 as innovative renewable energy technology.

To facilitate the integration of renewable energy and to increase flexibility and balancing services, Member States should set an indicative target for storage technologies.

To contribute to the achievement of the Union's binding target in a cost-effective manner and to ensure system efficiency, Member States should set an indicative minimum target at national level for demand flexibility corresponding to a 5% reduction of peak electricity demand by 2030.

In line with the Commission Recommendation on the **primacy of energy efficiency**, the Directive should take an integrated approach by promoting the most efficient renewable energy source for a given sector and application, and by promoting system efficiency in order to use the least amount of energy possible for the various economic activities.

#### ***Calculating the share of energy from renewable sources***

When calculating the share of renewable energy in a Member State, renewable fuels of non-biological origin should be included in the sector where they are consumed (electricity, heating and cooling, or transport). Where renewable fuels of non-biological origin are consumed in a Member State other than that in which they were produced, the energy generated by the use of renewable fuels of non-biological origin should account for 80% of their volume in the country and sector where they are consumed and 20% of their volume in the country where they are produced, unless otherwise agreed between the Member States concerned.

#### ***Joint projects***

Each Member State should enter into **cooperation agreements** to set up joint projects with one or more other Member States to produce renewable energy, including hybrid offshore renewable energy assets, as follows:

(a) by 31 December 2025, Member States with an annual electricity consumption of 100 TWh or less should set up at least two joint projects;

(b) by 2030 at the latest, Member States with an annual electricity consumption of more than 100 TWh should set up a third joint project.

### **Accelerating procedures**

Overly complex and lengthy administrative procedures are a major obstacle to the deployment of renewable energy. The amended text stressed the need to further **streamline administrative and permitting procedures** to reduce the administrative burden for both renewable energy projects and related grid infrastructure projects. Within one year of the entry into force of the Directive, the Commission should revise the permitting guidelines to shorten and simplify procedures for new projects, retrofitting projects and upgrading of renewable energy projects. Key performance indicators should be developed as part of these guidelines.

### **Integration of renewable energy in the building sector**

With a view to promoting the production and use of renewable energy and waste heat and cooling in the buildings sector, Member States should set an **indicative target** for the share of renewable energy produced on-site or nearby in the final energy consumption of their buildings sector in 2030 that is consistent with the indicative target of at least 49% of energy from renewable sources and waste heat and cooling in the buildings sector in the final energy consumption of the Union in 2030.

Member States should have the possibility to count waste heat and cold towards the indicative target for renewable energy in buildings, up to a limit of 20 %, with an upper limit of 54 %.

To promote the use of renewable energy in the heating and cooling sector, each Member State should increase the share of renewable energy in this sector by an **indicative 2.3 percentage points**, calculated as an annual average for the periods 2021-2025 and 2026-2030, using the share of renewable energy in the heating and cooling sector in 2020 as a reference point.

### **Reduction of greenhouse gas emission intensity in the transport sector**

In the transport sector, renewables deployment should lead to a **16% reduction** in greenhouse gas emissions, through the use of higher shares of advanced biofuels and a more ambitious quota for renewable fuels of non-biological origin such as hydrogen.

Fuel suppliers would be obliged to ensure that the share of advanced biofuels and biogas produced from feedstocks listed in Annex IX, Part A, in the energy supplied to the transport sector is at least 0.5 % in 2025 and at least 2.2 % in 2030, and the share of renewable fuels of non-biological origin is at least 2.6 % in 2028 and at least 5.7 % in 2030.

### **Biofuels, bioliquids and biomass fuels**

Energy from biofuels, bioliquids and biomass fuels should only be considered if they meet sustainability and greenhouse gas emission saving criteria and if they respect the waste hierarchy and take into account the cascading principle.

Biofuels, bioliquids and biomass fuels produced from agricultural biomass considered must not be produced from raw material from land of high biodiversity value (e.g. primary forests, old-growth forests and forests with high biodiversity value; areas designated for the protection of rare, threatened or endangered ecosystems or species; natural grasslands spanning more than one hectare with high biodiversity value).

### **Speeding up the launch of hydrogen**

Members also insisted on the transparency of green electricity components and the simplification of hydrogen ramp-up, including a **simpler system for guaranteeing of its origin**. The amended text stressed the importance of encouraging research and innovation in the field of clean energies, such as hydrogen, in order to meet the growing demand for alternative fuels and, above all, to make available on the market energy that is cheaper than fossil fuels like diesel, fuel oil and petrol, for which prices are now hitting record highs.

## **Renewable Energy Directive**

2021/0218(COD) - 12/09/2023 - Text adopted by Parliament, 1st reading/single reading

The European Parliament adopted by 470 votes to 120, with 40 abstentions, a legislative resolution on the proposal for a directive of the European Parliament and of the Council amending Directive (EU) 2018/2001 of the European Parliament and of the Council, Regulation (EU) 2018/1999 of the European Parliament and of the Council and Directive 98/70/EC of the European Parliament and of the Council as regards the promotion of energy from renewable sources, and repealing Council Directive (EU) 2015/652.

Parliament's position adopted at first reading following the ordinary legislative procedure amended the Commission proposal as follows:

### **Binding overall Union target for 2030**

Member States should collectively ensure that the share of energy from renewable sources in the Union's gross final consumption of energy in 2030 is at least 42.5 %. They should aim to achieve 45%. Member States should set an indicative target for innovative renewable energy technology of at least 5 % of newly installed renewable energy capacity by 2030. Member States should design support schemes for energy from biofuels, bioliquids and biomass fuels in such a way as to avoid incentivising unsustainable pathways and distorting competition with the material sectors, with a view to ensuring that woody biomass is used according to its highest economic and environmental added value.

### **Joint projects**

By 31 December 2025, each Member State should agree to establish a framework for cooperation on joint projects with one or more other Member States for the production of renewable energy, subject to the following:

- by 31 December 2030, Member States should endeavour to agree on establishing at least two joint projects;

- by 31 December 2033, Member States with an annual electricity consumption of more than 100 TWh shall endeavour to agree on establishing a third joint project.

### ***Coordinated mapping***

By 18 months after the date of entry into force of this amending Directive, Member States should carry out a coordinated mapping for the deployment of renewable energy in their territory to identify the domestic potential and the available land surface, sub-surface, sea or inland water areas that are necessary for the installation of renewable energy plants and their related infrastructure, such as grid and storage facilities, including thermal storage, that are required in order to meet at least their national contributions towards the overall Union renewable energy target for 2030.

### ***Renewables acceleration areas***

By 27 months after the date of entry into force of this amending Directive, Member States should ensure that competent authorities adopt one or more **plans** designating renewables acceleration areas for one or more types of renewable energy sources. Member States may exclude biomass combustion and hydropower plants.

In those plans, competent authorities should designate sufficiently **homogeneous land, inland water, and sea areas** where the deployment of a specific type or specific types of renewable energy sources is not expected to have a significant environmental impact, in view of the particularities of the selected area. Member States should ensure public participation regarding the plans designating renewables acceleration areas.

Member States may adopt one or more plans to designate dedicated infrastructure areas for the development of grid and storage projects that are necessary to integrate renewable energy into the electricity system where such development is not expected to have a significant environmental impact.

### ***Permit-granting procedure in renewables acceleration areas***

The permit-granting procedure should **not exceed 12 months** for renewable energy projects in renewables acceleration areas. However, in the case of offshore renewable energy projects, the permit-granting procedure shall not exceed two years.

The permit-granting procedure for the repowering of renewable energy power plants, for new installations with an electrical capacity of less than 150 kW, for co-located energy storage, including power and thermal facilities, as well as for their grid connection, where located in renewables acceleration areas, should not exceed six months. However, in the case of offshore wind energy projects, the permit-granting procedure shall not exceed 12 months.

Member States should ensure that the permit-granting procedure **should not exceed two years** for renewable energy projects located **outside renewables acceleration areas**.

In order to further promote and accelerate the repowering of existing renewable energy power plants, the amended text establishes a simplified permit-granting procedure for grid connections should be established where the repowering results in a limited increase in total capacity compared to the original project.

The duration of the permit procedure must not exceed (i) **three months** for the installation of solar energy and co-located energy storage equipment, including building-integrated solar installations, in existing or future man-made structures, excluding artificial water bodies; (ii) **one month** for the installation of solar energy equipment with a capacity of 100 kW or less, including for self-consumers of renewable energy and renewable energy communities; (iii) one month for the installation of heat pumps of less than 50 MW.

### ***Mainstreaming renewable energy in industry***

Member States should endeavour to increase the share of renewable sources in the amount of energy sources used for final energy and non-energy purposes in the industry sector by an indicative increase of at least **1.6 percentage points** as an annual average calculated for the periods 2021 to 2025 and 2026 to 2030.

Member States should ensure that the contribution of renewable fuels of non-biological origin used for final energy and non-energy purposes shall be **at least 42 %** of the hydrogen used for final energy and non-energy purposes in industry by 2030, and 60 % by 2035.

### ***Heating and cooling***

Each Member State should increase the share of renewable energy in this sector by at least **0.8 percentage points** calculated as an annual average for the period 2021-2025 and by at least 1.1 percentage points calculated as an annual average for the period 2026-2030. Member States should aim to increase the share of energy from renewable sources and from waste heat and cooling in heat and cooling networks by an indicative amount of 2.2 percentage points as an annual average over the period 2021-2030.

### ***Transport sector***

Each Member State should set an obligation on fuel suppliers to ensure that the amount of renewable fuels and renewable electricity supplied to the transport sector leads to a: (i) share of renewable energy within the final consumption of energy in the transport sector of at least 29 % by 2030; or (ii) **greenhouse gas intensity reduction of at least 14.5 % by 2030**.

To achieve this, the legislation on the one hand requires an increase in the share of advanced biofuels in the sector's consumption and, on the other, sets more ambitious quotas for renewable fuels of non-biological origin, such as hydrogen.

### ***Use of biomass***

Members called for stricter criteria on the use of biomass to ensure that the EU does not subsidise unsustainable practices. Biomass harvesting should be done in a way that prevents negative impacts on soil quality and biodiversity.

## **Renewable Energy Directive**

The European Parliament adopted by 418 votes to 109, with 111 abstentions, amendments on the proposal for a directive of the European Parliament and of the Council amending Directive (EU) 2018/2001 of the European Parliament and of the Council, Regulation (EU) 2018/1999 of the European Parliament and of the Council and Directive 98/70/EC of the European Parliament and of the Council as regards the promotion of energy from renewable sources, and repealing Council Directive (EU) 2015/652.

The matter was referred back to the committee responsible for inter-institutional negotiations.

The main amendments adopted in plenary are the following:

### ***Binding overall EU target for 2030***

Member States should collectively ensure that the share of energy from renewable sources in the Union's gross final energy consumption in 2030 is **at least 45%**. Each Member State should set an **indicative target of at least 5%** of newly installed renewable energy capacity between the date of entry into force of the Directive and 2030 as innovative renewable energy technology.

Member States should also:

- set an indicative target for storage technologies to facilitate the integration of renewable energy and increase flexibility and balancing services;
- set an indicative minimum target at national level for demand flexibility corresponding to a 5% reduction in peak electricity demand by 2030. This target would be achieved through demand flexibility in all end-use sectors, including through building renovation and energy efficiency.

Each Member State should identify in its integrated energy and climate plan the measures needed to achieve these targets.

### ***Calculating the share of energy from renewable sources***

When calculating the share of renewable energy in a Member State, renewable fuels of non-biological origin should be included in the sector where they are consumed (electricity, heating and cooling, or transport). Where renewable fuels of non-biological origin are consumed in a Member State other than that in which they were produced, the energy generated by the use of renewable fuels of non-biological origin should account for 80% of their volume in the country and sector where they are consumed and 20% of their volume in the country where they are produced, unless otherwise agreed between the Member States concerned.

### ***Joint projects***

Each Member State should enter into **cooperation agreements** to set up joint projects with one or more other Member States to produce renewable energy, including hybrid offshore renewable energy assets, as follows:

- (a) by 31 December 2025, Member States with an annual electricity consumption of 100 TWh or less should set up at least two joint projects;
- (b) by 2030 at the latest, Member States with an annual electricity consumption of more than 100 TWh should set up a **third joint project**.

### ***Accelerating procedures***

Overly complex and lengthy administrative procedures are a major obstacle to the deployment of renewable energy. The amended text stressed the need to further **streamline administrative and permitting procedures** to reduce the administrative burden for both renewable energy projects and related grid infrastructure projects.

National rules on authorisation, certification and licensing procedures should be proportionate and necessary and support the implementation of the energy efficiency principle. All administrative procedures should be simplified.

### ***Integration of renewable energy in the building sector***

With a view to promoting the production and use of renewable energy and waste heat and cooling in the buildings sector, Member States should set an **indicative target** for the share of renewable energy produced on-site or nearby in the final energy consumption of their buildings sector in 2030. Member States should have the possibility to count waste heat and cold towards the indicative target for renewable energy in buildings, up to a limit of **20 %**, with an upper limit of **54 %**.

### ***Heating and cooling sector***

To promote the use of renewable energy in the heating and cooling sector, each Member State should increase the share of renewable energy in this sector by an **indicative 2.3 percentage points**, calculated as an annual average for the periods 2021-2025 and 2026-2030, using the share of renewable energy in the heating and cooling sector in 2020 as a reference point.

### ***Mainstreaming renewable energy in industry***

Industry is expected to increase the use of renewable energy by **at least 1.9 percentage points** on an indicative average annual basis by 2030. This increase would be calculated as an average for the three-year periods 2024-2027 and 2027-2030.

### ***Reduction of greenhouse gas emission intensity in the transport sector***

In the transport sector, renewables deployment should lead to a **16% reduction** in greenhouse gas emissions, through the use of higher shares of advanced biofuels and a more ambitious quota for renewable fuels of non-biological origin such as hydrogen.

Fuel suppliers would be obliged to ensure that the share of advanced biofuels and biogas produced from feedstocks listed in Annex IX, Part A, in the energy supplied to the transport sector is at least 0.5 % in 2025 and at least 2.2 % in 2030, and the share of renewable fuels of non-biological origin is at least 2.6 % in 2028 and at least 5.7 % in 2030.

From 2030 onwards, fuel suppliers should deliver at least 1.2% of renewable fuels of non-biological origin and renewable hydrogen to the maritime transport mode.

### ***Biofuels, bioliquids and biomass fuels***

Energy from biofuels, bioliquids and biomass fuels should only be considered if they meet sustainability and greenhouse gas emission saving criteria and if they respect the waste hierarchy and take into account the cascading principle.

Biofuels, bioliquids and biomass fuels produced from agricultural biomass considered must not be produced from raw material from land of high biodiversity value (e.g. primary forests, old-growth forests and forests with high biodiversity value; areas designated for the protection of rare, threatened or endangered ecosystems or species; natural grasslands spanning more than one hectare with high biodiversity value).

Members adopted amendments calling for a **gradual reduction in the share of share of fuels derived from primary woody biomass**.

### ***Speeding up the launch of hydrogen***

Members also insisted on the transparency of green electricity components and the simplification of hydrogen ramp-up, including a **simpler system for guaranteeing of its origin**. The amended text stressed the importance of encouraging research and innovation in the field of clean energies, such as hydrogen.

## **Renewable Energy Directive**

2021/0218(COD) - 31/10/2023 - Final act

PURPOSE: to adopt new rules in the field of renewable energies with a view to reducing greenhouse gas emissions, energy dependency and energy prices.

LEGISLATIVE ACT: Directive (EU) 2023/2413 of the European Parliament and of the Council amending Directive (EU) 2018/2001, Regulation (EU) 2018/1999 and Directive 98/70/EC as regards the promotion of energy from renewable sources, and repealing Council Directive (EU) 2015/652.

CONTENT: the new Renewable Energy Directive aims to increase the share of renewable energy in the EU's overall energy consumption to **42.5% by 2030**, with an additional indicative target of 2.5% intended to help reach the 45% target. Each Member State will contribute to this common target.

Member States will set an indicative target for innovative renewable energy technologies of at least **5%** of newly installed renewable energy capacity by 2030.

All Member States will contribute to more ambitious sectoral targets in the transport, industry, buildings and district heating and cooling sectors.

### ***Mapping for the deployment of renewable energy***

Member States will be required to carry out coordinated mapping for the deployment of renewable energy and related infrastructure on their territory, in coordination with local and regional authorities. They will identify the **terrestrial, surface and underground areas**, and the maritime and inland water areas required for the establishment of renewable energy installations and related infrastructure, in order to meet their national contributions to the revised global renewable energy target for 2030.

By 21 February 2026 at the latest, Member States must ensure that the competent authorities adopt one or more plans designating **renewables acceleration areas** for one or more types of energy source.

### ***Transport***

Member states will have the possibility to choose between:

- a **binding target of a 14.5%** reduction in greenhouse gas intensity in transport from the use of renewables by 2030;
- or a **binding share of at least 29%** of renewables within the final consumption of energy in the transport sector by 2030.

The new rules establish a binding combined sub-target of 5.5% for **advanced biofuels** (generally derived from non-food-based feedstocks) and **renewable fuels of non-biological origin** (mostly renewable hydrogen and hydrogen-based synthetic fuels) in the share of renewable energies supplied to the transport sector. Within this target, there is a minimum requirement of 1% of renewable fuels of non-biological origin (RFNBOs) in the share of renewable energies supplied to the transport sector in 2030.

### ***Buildings, heating and cooling***

Member States will determine an indicative national share of renewable energy produced on-site or nearby as well as renewable energy taken from the grid in final energy consumption in their building sector in 2030 that is consistent with an **indicative target of at least a 49%** share of energy from renewable sources in the building sector in the Union's final energy consumption in buildings in 2030.

Each Member State will increase the share of renewable energy in this sector by at least 0.8 percentage points calculated as an annual average for the period 2021-2025 and by at least **1.1 percentage points calculated as an annual average** for the period 2026-2030. The minimum annual average rate applicable to all Member States is complemented by additional indicative increases calculated specifically for each Member State.

### ***Industry***

The Directive states that industry will need to increase the use of renewable energy annually by **1.6%**. Member States agreed that **42%** of the hydrogen used in industry should come from renewable fuels of non-biological origin (RFNBOs) by 2030 and **60%** by 2035.

Member States will have the possibility to discount the contribution of RFNBOs in industry use by 20% under two conditions: (i) if the Member States' national contribution to the binding overall EU target meets their expected contribution the share of hydrogen from fossil fuels consumed in the Member State is not more 23% in 2030 and 20% in 2035.

### ***Bioenergy***

The Directive strengthens the **sustainability criteria** for the use of biomass for energy, in order to reduce the risk of unsustainable bioenergy production. Member states will ensure that the cascading principle is applied, with a focus on support schemes and with due regard to national specificities.

***Faster permits for projects***

Permitting procedures for renewable energy projects will be accelerated. The duration of the permitting procedure will **not exceed twelve months** for renewable energy projects in renewables acceleration areas. However, in the case of offshore renewable energy projects, the permit-granting procedure will not exceed **two years**.

The duration of the permit procedure must not exceed (i) **three months** for the installation of solar energy and co-located energy storage equipment, including building-integrated solar installations, in existing or future man-made structures, excluding artificial water bodies; (ii) **one month** for the installation of solar energy equipment with a capacity of 100 kW or less, including for self-consumers of renewable energy and renewable energy communities; (iii) **one month** for the installation of heat pumps of less than 50 MW.

ENTRY INTO FORCE: 20.11.2023.

TRANSPOSITION: 21.5.2025.
