Final act

Safety and health of workers: protection against risk from explosive atmospheres

PREVIOUS COMMUNITY LEGISLATION: at Community level there are no legal provisions with the exception of two Directives (92/91/EEC and 92/104/EEC) which are intended to protect workers in the extractive industries. This proposal for a directive takes the form of an individual directive within the meaning of Article 16(1) of Framework Directive 89/391/EEC of 12 June 1989 (OJ L 183, 29.6.1989, page 1) on the introduction of measures to encourage improvements in the health and safety of workers at work. It supplements and clarifies the provisions of the Framework Directive. The recitals of Directive 94/9/EC on the approximation of the laws of the Member States concerning equipment and protective systems intended for use in potentially explosive atmospheres (OJ L 100, 19.4.1994, page 1), envisaged a supplementary directive which would, in particular, aim at explosion hazards which derive from a given use and/or type and method of installation. PREVIOUS POSITION OF EP: the EP insists that the health and safety of workers are guaranteed the best possible protection. It has always been concerned that workers should gain the maximum possible benefit from the directives on health and safety protection. It has sought to ensure that, where workers speak different languages, information is provided in those languages. SITUATION IN THE MEMBER STATES: legal and administrative provisions exist in several Member States of the European Union. Generally speaking, these are framework laws which are supplemented by administrative provisions and legal instruments. Specific technical provisions usually only exist in respect of electrical sources of ignition in the form of technical orders, guidelines or international or national standards; only a few national provisions exist in respect of mechanical or other sources of ignition.

Safety and health of workers: protection against risk from explosive atmospheres

PURPOSE: to set and harmonise the minimum requirements for improving the safety and health protection of workers potentially at risk from explosive atmospheres; to create a framework for industry, in general, of protection against explosions equivalent to that which exists for the extractive industry. CONTENT: - field of application: exclusion from the field of the Directive's scope of medical environments, appliances burning gaseous fuels, handling of explosives, the use of means of transport to which the pertinent provisions of international agreements and implementing Community Directives apply, and extractive industries; - definition of an explosive atmosphere; - employer obligations: prevention of and protection against explosions, assessment of explosion risks. To respect these obligations, the proposal lays down technical requirements with which work equipment and the workplace must comply. A document regarding protection against explosions will be drawn up by the employer who assesses the risks. - The employer is required to classify places (in the workplace) by zone (described in Annex I) where workers are likely to be exposed to explosive atmospheres and has to apply minimal requirements (outlined in Annex IIa). These positions have to be duly indicated (Annex III). Transitional provisions are laid down for existing workplaces and equipment (those considered safe may continue to operate). From 01.07.2003, all equipment put into service for the first time would have to conform with the Directive (transitional periods of 3 years are provided for workplaces that are already used). - A Vademecum will be drawn up describing how the requirements of this Directive will be applied by the Council. The Directive provides for measures regarding the information and consultation of workers. The date for transposition of the Directive is set at 31.12.1997. - Annex I: classification of zones at risk: maximum conformity with existing international (ISO) standards and the taking into consideration of explosive atmospheres in the form of a combustible dust cloud in the air; - Annex IIA: requirements including organisational measures (obligation to have a sufficient number of qualified workers - work permits - written instructions), the evaluation of risks of explosion, the principles for the design of new or the modification of existing installations, protection measures against explosions (comparable to those that exist in Directive 94/9/EC on protection equipment and systems used in explosive atmospheres); - Annex IIb: correspondence between the categories defined in Directive 94/9/EC and the various work zones of this Directive; Annex III: presentation of a system of uniform signs for dangerous places (application of the 'EX' symbol); - Annex IV (not binding): indicative criteria for the execution of works in the zones; - Annex V: non-exhaustive list of subjects to be dealt with in the Vademecum drawn up in agreement with the Council.?

Safety and health of workers: protection against risk from explosive atmospheres

The Committee approves the Commission's proposal. It urges the Commission and the Council to confirm that explosion risks due to chemical substances containing oxygen and fuel will be covered by the chemical agents Directive, and to ensure that there is no uncertainty or overlap between the two proposals. It would also draw the Commission's attention to the importance and relevance of inserting a reference to Articles 8 (among employers' obligations) and 13 (workers' obligations) of the Framework Directive in the present proposal. As regards questions of work organization, workplaces and equipment already in use, the three-year deadline stipulated in Article 9(4) for compliance with the minimum requirements could be eventually extended to five with a view to facilitating application, particularly by SMEs and crafts. In connection with the technical adjustments to the Annexes, the Committee underlines the important role of the social partners. The Advisory Committee for Safety, Hygiene and Health Protection at Work should be given a more prominent role at the application stage of the Directive and in preparing the vademecum prior to submission to the Council.?

Safety and health of workers: protection against risk from explosive atmospheres

Mr Graham MATHER saw his report adopted on the protection of workers potentially at risk from explosive atmospheres. ?

Safety and health of workers: protection against risk from explosive atmospheres

The rapporteur pointed out the advantages of the proposal in question, which was aimed at preventing and protecting against explosions in

certain high-risk working environments; the proposal for a directive set a minimum uniform safety standard for all Member States; in addition, the amendments tabled sought to introduce certain technical aspects as well as to strengthen the Commission's wording: for example, Amendment No 12 provided for the continuous monitoring of the protection system, instead of just one review a year. However, Commissioner Flynn said that he could not accept Amendments Nos 6, 9, 10 and 12 (especially the latter, as this would have imposed an excessively harsh burden on SMEs). However, he was prepared to accept Amendments Nos 2, 3, 4, 7 and 8 in part, and Amendments Nos 1, 5, 11, 13 and 14 in full (and especially the latter, as it was aimed at helping SMEs adapt to the provisions of the Directive).

Safety and health of workers: protection against risk from explosive atmospheres

In adopting the report by Mr Graham MATHER (PPE, UK), the European Parliament approved the proposal for a directive with the following amendments: - Parliament urged that the directive should be applied in a flexible way and thus proposed that it should follow certain principles for the prevention and reduction of effects of an explosion rather than preventing the formation of explosive atmospheres; it stressed that the requisite protection for workers can be provided only by taking measures to respect these principles; - on supervision, Parliament urged that it should be ensured by use of instruments and modern technical means as well as by education and training in working environments where explosive atmospheres may arise; where workers from several undertakings are present at the same workplace each employer shall ensure appropriate supervision of its workers or may designate one of the employers as overall supervisor; - on protection documents, Parliament asked that employer should draw up and keep up to date a health and safety plan, which may be a set of documents satisfying the pertinent requirements of Directive 89/391/EEC; - requirements for modifications to hardware or equipment already used before entry into force of the directive must be applied on a similar timescale to Directive 94/98/EEC, which does not come into force before 2003. - the Member States must take measures to inform undertakings likely to be affected by the directive, particularly SMEs, of the provisions of the directive, particularly by ensuring a wide distribution of the vade-mecum setting out guidelines for some possible ways of complying with minimum requirements of the directive; - the periods for implementing the directive are extended (24 months after adoption of the directive instead of 31 December 1997); - finally, in Annex I (Zones), Parliament stresses that each zone or place where there is an explosive atmosphere should be assessed in accordance with normal operation. ?

Safety and health of workers: protection against risk from explosive atmospheres

The European Commission's amended proposal incorporates, in full or in part, 10 of the 14 amendments approved by the European Parliament at first reading. The main amendments incorporated cover the following points: - appropriate supervision of workers, using monitoring devices and modern technical means (however, the Commission has not accepted the part of the amendment on the training of workers and the designation of a responsible employer where workers from several undertakings are present at the same workplace), - the obligation to draw up an explosion protection document and keep it up to date, - requirements relating to work equipment in use before entry into force of the Directive, - preparation of a vademecum setting out general guidelines, - information for SMEs on the main provisions of the directive, - amendment of the Annex on 'explosion zones', which must be assessed on the basis of their normal operation. The Commission has not accepted the amendment relating to the date of entry into force of the Directive (24 months after adoption). It proposes 31 December 1999 as the date for transposition of in the Member States. A second parallel group of amendments introduced by the Commission cover editorial and linguistic aspects and attempt to make the text of the proposal consistent with that of Directive 94/9/EC on protective systems intended for use in potentially explosive atmospheres. ?

Safety and health of workers: protection against risk from explosive atmospheres

The Council common position is based on an Austrian Presidency text which maintains in general terms the approach of the Commission's proposal but seeks to shorten the text in particular by avoiding repetition of provisions already contained in framework directive 89/391/EEC (in particular with regard to consultation and participation of workers and worker information) and concentrating on those provisions which are essential for the protection of workers potentially at risk from explosive atmospheres. It changes the general structure of the text of the Commission proposal by giving greater prominence to provisions in respect of the explosion protection document and the investigation and assessment of explosion risks. At the same time, the Council has considerably weakened the Commission's proposal by removing provisions considered essential for the protection of the health and safety of workers potentially at risk from explosive atmospheres, namely: 1) the requirement to regularly review the measures to prevent and to protect against explosions at least once a year has been replaced by the concept of a "regular review" at the discretion of the employer; 2) the removal of an article on appropriate supervision and competent workers (in this area, the Council refers back to the framework directive) 3) the removal of certain requirements from the annex regarding equipment already in use, such that the common position does not cover old equipment until it has been replaced. As regards the European Parliament's amendments, out of the 14 amendments which it adopted, the Council accepted 4 in total and 2 in part. These amendments relate to the following: - prevention of formation, avoidance of ignition and mitigation of the effects of explosive atmospheres; - strengthening coordination and provisions relating to the explosion protection document; - compliance of new work equipment with the directive from 30/06/2003; - classification of hazardous places according to the frequency and duration of explosive atmospheres; - making provision in the annexes for checks by competent persons of places where explosive atmospheres can occur. All of the other amendments (8 in total) were rejected (in particular, the amendment which sought to eliminate all risks to workers).?

Safety and health of workers: protection against risk from explosive atmospheres

The Commission regrets that the common position has considerably weakened the Commission's proposal since provisions considered essential for the protection of the health and safety of workers potentially at risk from explosive atmospheres have been removed. For this reason, the Commission maintains its reservations against the following deletions from the amended proposal: - the requirement to regularly review the measures to prevent and to protect against explosions at least once a year was considered essential as the concept of "regular review" is imprecise and lies within the discretion of the employer; - the reintroduction of requirements on appropriate supervision and on the competent workers was judged essential since work in potentially explosive atmospheres represents a specific risk to workers and the

provisions of the framework directive are not sufficiently specific in this regard; - the Commission could not agree with the deletion of requirements relating to the criteria for the selection of equipment and protective systems, since directive 94/9/EC is not applicable to equipment already in use. Without these requirements, workers will be exposed to risks relating to old equipment for which no community obligation exists, until the replacement of this old equipment takes place.?

Safety and health of workers: protection against risk from explosive atmospheres

The Committee adopted the report on Bartho PRONK (EPP, NL) on minimum requirements for improving the safety and health protection of workers at risk from explosive atmospheres. The Council had adopted fully or partially six and rejected eight amendments proposed by the Parliament in the first reading. It had also made significant changes to the Commission proposal in order to focus on the provisions essential for the protection of workers. Mr. PRONK, however, felt that the common position considerably weakens the original text. Therefore, the Committee not only reinserted the amendments tabled by the EP in the first reading but also reintroduced slightly modified texts from the Commission's original proposal relating to employers' general obligations and the explosion protection document. In the retabled amendments, the Committee calls the Commission to draw up a vademecum setting out guidelines for complying with the minimum requirements of the directive. The Member States should inform companies of the provisions of the directive. The Committee also wants to specify the provisions on "explosion protection measures". ?

Safety and health of workers: protection against risk from explosive atmospheres

Following the entry into force of the Treaty of Amsterdam on 01/05/99, the European Parliament confirmed (without debate) as its first reading under codecision procedure its vote of 20/06/96 on the proposal for a European Parliament and Council directive on minimum requirements for improving the safety and health protection of workers potentially at risk from explosive atmospheres. The Parliament's rapporteur is Bartho Pronk (NL,PPE).?

Safety and health of workers: protection against risk from explosive atmospheres

At second reading under codecision procedure, the European Parliament adopted the recommendation by Bartho Pronk (PPE,NL), which amends the Council common position on minimum requirements for improving the safety and health protection of workers potentially at risk from explosive atmospheres, notably in the following areas: - explicitly setting out employers' general obligations in this area; - requiring that, further to the provisions made in the common position, the explosion protection document shall also demonstrate that the workplace and work equipment, including warning devices, are designed, operated and maintained with due regard for safety and that arrangements have been made for the safe use of work equipment; - requiring the Commission to draw up a vademecum setting out guidelines for possible ways of complying with the minimum requirements contained in the directive; - requiring Member States to ensure that measures are taken to inform undertakings likely to be affected by the proposed directive (particularly SMEs) of its provisions and that the proposed vademecum is widely distributed; - providing that, if an explosive atmosphere contains several types of flammable and/or combustible gases, vapours, mists or dusts, protective measures shall be appropriate to the greatest potential hazard; - providing that, where equipment and protective systems can give rise to a spread of additional risks in the event of a power failure, it must be possible to maintain them in a safe state of operation independently of the rest of the installation; - providing that manual override must be possible in order to shut down the equipment and protective systems incorporated within automatic processes which deviate from the intended operating conditions, provided that this does not compromise safety and only workers competent to do so take such action; - providing that, when the emergency shutdown system is actuated, accumulated energy must be dissipated as quickly and as safely as possible or isolated so that it no longer constitutes a hazard.?

Safety and health of workers: protection against risk from explosive atmospheres

The Commission considers all 8 amendments, adopted by the European Parliament during its second reading, acceptable. The Commission has amended its proposal as a consequence. The amendments aim at : - the reintroduction of the general obligations upon the employer concerning a safe working environment, appropriate supervision and designation of an overall supervisor (which were deleted by the Council); - the reintroduction of the requirements of the Commission's proposal design, operation and maintenance of the workplace and work equipment including safety warning signs are safe; - reintroducing the requirement of the establishment of a vademecum setting out guidelines for some possible ways of complying with the directive; - reintroducing the requirement of an obligation of information to undertakings in particular to SMEs; - the reintroduction of protection measures corresponding to the greatest potential hazard for certain gases and dangerous fumes; - the reintroduction of requirements already applicable to new equipment (e.g.: the containment of risks originating from power failure, the possibility of a manual override of automatic processes, etc...); - bringing into line of certain safety signs.?

Safety and health of workers: protection against risk from explosive atmospheres

The committee was able to approve a joint text at its meeting of 21 October 1999 after Parliament's delegation had given its agreement to the final change which the Council had made to Amendment 4 (the last outstanding point at issue). The Council's proposed solution was to include the guidelines in the guide of good practice, while making an explicit reference to them. The EP delegation to the Conciliation Committee regarded the final outcome of conciliation as completely satisfactory for Parliament, especially as regards the 'guide of good practice', the 'practical guidelines' (Article 11 of the joint text) and the 'information to undertakings' (Article 12). It therefore adopted a draft legislative resolution on 24 November 1999 approving the joint text and recommended that it be adopted by Parliament at third reading.

Safety and health of workers: protection against risk from explosive atmospheres

Under the codecision procedure, third reading, the Parliament approved the joint text.?

Safety and health of workers: protection against risk from explosive atmospheres

PURPOSE : to extend explosion protection to all industrial sectors and to supplement the existing directive concerning equipment and protective systems (daughter directive of Council Directive 89/391/EEC on workers' health and safety). **COMMUNITY MEASURE** : Directive 1999/92/EC on minimum requirements for improving the safety and health protection of workers potentially at risk from explosive atmospheres (15th individual directive within the meaning of Article 16(1) of Directive 89/391/EEC). **CONTENT** : The Directive places a number of obligations on employers : a general duty to prevent and protect against explosions, the duty to produce and maintain an 'explosion protection document' (a health and safety plan for explosion protection measures providing detailed information about the steps taken), a duty to classify places where explosive atmospheres may occur into zones (based on the nature of such an atmosphere, the frequency and duration of its occurrence and an assessment of its anticipated effects). Dangerous areas in the workplace will have to be signposted with a prescribed European warning sign. The Commission has been mandated to draw up practical guidelines in the form of a non-binding guide of good practice. Member States shall take the greatest possible account of this guide in drawing up their national policies for the protection of the health and safety of workers. They shall also, on request, endeavour to make relevant information available to employers. **ENTRY INTO FORCE**: 28/01/2000. Member States must transpose the Directive into national legislation by 30/06/2003 at the latest.?
