European Monetary Institute EMI. 2nd annual report 1995

OBJECTIVE: In its second annual report (1995) the European Monetary Institute (EMI) provides an update on the way in which it is carrying out its task of preparing for EMU and on the economic results achieved in the EU Member States. **SUBSTANCE:** The report stresses that the EMI has stuck to the timetable for the preparatory work, which requires it to determine precisely the regulatory, organizational and logistic framework within which the European system of central banks will perform its tasks during Stage 3. Amongst the results achieved it mentions: - the EMI report entitled 'The Changeover to the Single Currency', which was the basis for a proposal submitted in December 1995 to the Madrid European Council, where the proposal was adopted; - the preparatory work on monetary policy instruments; - progress made in the area of payments systems (agreement on the TARGET system of linked real-time gross settlement systems). The EMI has also progressed in the preparation of EU-wide statistics and a single foreign exchange policy, in preparatory work for the production of the European banknotes and in the harmonization of accounting rules and standards. Crucial items on the agenda for 1996 are progress in defining monetary and exchange rate policy cooperation between the countries participating from the start in the Euro area and other EU countries, as well as in devising the appropriate monetary policy strategy for the European Central Bank. In parallel with the preparatory work for Stage 3, the EMI also has an important role in Stage 2 of strengthening cooperation amongst the national central banks and coordination of national monetary policies with the aim of ensuring price stability. In this connection the report notes that the EU countries have made considerable progress in reducing inflation and leading towards price stability and that, generally speaking, the monetary policies designed to ensure price stability have led to an overall fall in inflation. Long-term interest rates have fallen over the year as a whole, thereby continuing the downward trend observed since 1990. Lastly, following a period of instability at the beginning of the year, the situation on the exchange front has stabilized. However, the key to convergence remains fiscal policy. The deficits in most EU Member States are well over 3% of GDP and are therefore excessive. In addition, debt ratios in a number of countries are well in excess of the 60% reference value laid down in the Treaty and, on average, are continuing to increase. The EMI takes the view that the current economic slowdown does not provide justification for postponing necessary consolidation measures. Fiscal consolidation focused essentially on a reduction in public expenditure rather than tax increases is essential as a way of relieving the burden of debt interests, addressing the problems which the ageing of the population will eventually bring and making the most of the resumption in growth. ?

European Monetary Institute EMI. 2nd annual report 1995

The ECON adopted the report by Mr Carles GASOLIBA I BÖHM (ELDR). The second annual report of the EMI covers the financial and monetary situation in the European Union and preparatory work for the third stage of EMU. The analysis of the situation does not add any new information to the Commission's Annual Economic Report for 1996. The ECON points out that there are certain contradictions as regards the explanations given for the economic downturn. - On the role of the EMI: the report calls on the EMI to play a more active role in the coordination of the Member States' monetary policy, to pursue close cooperation with the other European institutions and to strengthen its relations with the various financial institutions in order to enable the future ECB to operate effectively in this area. - On the single currency: the ECON takes the view that the participation of all EU currencies in the European exchange rate mechanism is a necessary condition for safeguarding the proper functioning of the single market and for securing the transition to EMU. As laid down in its statutes the EMI is required, by 31 December 1996, to determine the instruments and procedures needed for a single exchange policy to be conducted. - On public deficits: although sounder public finances are a necessary condition for monetary union, it must not be at the expense of public and private investment in infrastructure and human capital. The ECON also rejects the position of the EMI which implicitly links the share of the public sector in the economy to the level of structural deficits. - On unemployment: here too, the ECON disagrees with the EMI report, contesting the idea that a more flexible labour market will make an essential contribution to the fight against unemployment. It reiterated that the Commission, in its economic report, posited that a process of strong growth and active labour market policies were the only ways of reabsorbing unemployment. ?

European Monetary Institute EMI. 2nd annual report 1995

Parliament has adopted the report by Mr Carles GASOLIBA I BÖHM (ELDR) on the 1995 Annual Report of the European Monetary Institute. It takes the view that the analysis of the situation does not add any new information to the Commission's Annual Economic Report for 1996 and even points out that there are certain contradictions as regards the explanations given for the economic downturn. Parliament nonetheless welcomes the EMI report as a useful and comprehensive document on the state of the preparations for EMU and welcomes the proposal made by Mr Lamfalussy concerning the publication of half-yearly reports on the work done by the EMI. - On the role of the EMI: the report calls on the EMI to play a more active role in the coordination of the Member States' monetary policy, to pursue close cooperation with the other European institutions and to strengthen its relations with the various financial institutions in order to enable the future ECB to operate effectively in this area. - On the single currency: Parliament takes the view that the participation of all EU currencies in the European exchange rate mechanism is a necessary condition for safeguarding the proper functioning of the single market and for securing the transition to EMU. As laid down in its statutes the EMI is required, by 31 December 1996, to determine the instruments and procedures needed for a single exchange policy to be conducted. - As regards public deficits: Parliament points out that, although fiscal consolidation is a necessary condition for monetary union, it must not be at the expense of public and private investment in infrastructure and human capital. Parliament also wishes

the general public to be involved in the preparation process relating to the production of Euro banknotes. It considers that close cooperation with the information campaign in this field would be very helpful. Lastly, Parliament calls for the next EMI annual report to contain a detailed analysis and evaluation of the effects of exchange rate fluctuations on trade, investment, growth and employment from both a micro-economic and a macro-economic perspective. ?
