Final act

[Directive 1998/7](#)

[OJ L 101 01.04.1998, p. 0017](#) Summary

Consumer credit: annual percentage rate of charge APR (amend. Directive 87/102/EEC)

OBJECTIVE: guarantee the use of a single method for calculating the annual percentage rate of charge (APR) for consumer credit throughout the Community. **SUBSTANCE:** the Commission proposal, accompanied by a report which will make it possible, in the light of experience, to apply a single Community mathematical formula for calculating the annual percentage rate of charge, includes the following provisions: - acceptance and definitive introduction throughout the Member States of the mathematical formula laid down in Directive 90/88/EEC; - as regards the elements of cost to be included in the calculation of the APR, no change to the list of exceptions in Article 1a(2) of Directive 90/88/EEC. Accordingly, the proposal for a directive makes the following changes to Directive 90/88/EEC: - requirement to use, in addition to the expression 'annual percentage rate of charge', a symbol which will be identical in all the Member States; - deletion of Article 1a(5), which granted those Member States which wished to retain a different method for calculating the APR a derogation until 31 December 1995 (used by Germany and Finland); - deletion of Article 1a(3), which allowed Member States which had national laws in force on 1 March 1990 imposing maximum limits on the APR and which excluded costs other than those referred to in Article 1a(2) to continue to apply those provisions (no Member State made use of the possibility); - insertion in Annex II of a stipulation that accuracy to two decimal places should be required; - insertion in Annex II of a stipulation that a year should have 365 or 366 days; - linguistic changes and in the English and Greek versions. ?

Consumer credit: annual percentage rate of charge APR (amend. Directive 87/102/EEC)

The proposal is the logical and scheduled follow-up to previous work on the revision of the first Directive on consumer credit. Accordingly, the Committee supports the proposal's aim to introduce a uniform method of calculating the annual percentage rate of charge (APR) and thus establish a basis for comparing the interest rates used in all EEA countries. The Committee notes, however, that the objective has only been achieved in part: there are still considerable discrepancies in the definitions and items used in calculating the APR for a single market for consumer credit which has still to see the light of day. The Committee calls on the Commission to alert consumers to the dangers of simply comparing the rates without taking into consideration the currency or the economy of the Member States, and of taking the European symbol printed beside the APR as a sign of official approval. The Committee recommends extending the scope given to some Member States to use a different APR formula until the Directive is adopted, and would point out the costs involved in adapting software. Accordingly, and in view of the basically marginal impact of the proposed changes, the Committee calls for the entry into force of the Directive to be deferred to coincide with the switch to the single currency.?

Consumer credit: annual percentage rate of charge APR (amend. Directive 87/102/EEC)

'European citizens should not be regarded first and foremost as consumers. The single market has been completed, but we are people first and customers second. ... We have had a very long and, from the legal point of view, very interesting discussion', said the chairman of the Committee, Carlo CASINI (EPP, I), after his committee had adopted three reports on consumer protection. 'The members voted according to their understanding of the law, disregarding party divides. I am pleased with what has been achieved, since the texts are now clearer, more coherent, and more useful', Mr CASINI said. The laws on consumer credit still vary from one Member State to another. The Commission has therefore proposed to harmonize the mathematical method used to calculate the annual percentage interest rate. By adopting the report by Marlies MOSIEK-URBAHN (EPP, D), under the codecision procedure, at first reading, the committee has endorsed this proposal but made some adjustments.?

Consumer credit: annual percentage rate of charge APR (amend. Directive 87/102/EEC)

The rapporteur was against the adoption of a European symbol, namely the percentage rate surrounded by 12 stars, as this could mislead consumers. In addition, its display on the screen of computers and typewriters would pose problems. Finally, Mrs Mosiek-Urbahn proposed the date of 1 January 1999, instead of that proposed by the Commission (31 December 1996), in order to allow credit institutions the time needed to adapt to the introduction of the euro. Commissioner Bonino replied that the symbol in question had been introduced at the request of the Member States and that it was not therefore a Commission idea. She could also not accept the amendment proposing that the basis for calculation should be an agreed period of time rather than the actual calendar year which was actually a more precise period according to the calculation proposed by the Commission. However, Mrs Bonino did not reject the amendment on the deadline for transposition of the directive.

Consumer credit: annual percentage rate of charge APR (amend. Directive 87/102/EEC)

In adopting the report by Mrs Marlies MOSIEK-URBAHN (EPP, D) Parliament approved the amendment of the 1987 directive on the

approximation of provisions on consumer credit. With its amendments Parliament calls for: - calculation of the annual percentage rate of charge to be based on a uniform 365 day year (and not 365 or 366 as proposed by the Commission); - deletion of the requirement of accuracy to two decimal places in the annual percentage rate of charge; - deletion of the symbol which should accompany the use of the term 'annual percentage rate of charge'; - extension of the deadline for transposition of the directive (1 January 1999 instead of 31 December 1996).
?

Consumer credit: annual percentage rate of charge APR (amend. Directive 87/102/EEC)

The Commission accepted, either in full or in part, six of the eight amendments adopted by Parliament at first reading and amended its original proposal accordingly. The changes are as follows: - abandonment of the idea of a symbol to accompany the use of the term 'annual percentage rate of charge'; - expression of the period between the dates used in making the calculation in calendar or standard years (twelve months of equal length, i.e. 30.41666 days); - transposition of the directive by 1 January 1999 at the latest. The Commission did not accept the amendment concerning the need to adopt a standard definition of the components of the APR alongside the harmonization of the methods of calculation. ?

Consumer credit: annual percentage rate of charge APR (amend. Directive 87/102/EEC)

The Commission noted that the common position agreed with Parliament in rejecting the idea of a logo for the Annual Percentage Rate of Charge (APR) for consumer credit and that it understood the reasons for Parliament's amendments on the harmonization of the cost elements and on the intervals for calculating the APR. The Council was more in line with the Commission on the number of decimals (at least one), whereas it wanted an even longer transposition period than that proposed by Parliament (two years). The Commission believed that the Council's solutions were well-balanced. It hoped that the Directive would come into effect as soon as possible and, therefore, supported the common position. ?

Consumer credit: annual percentage rate of charge APR (amend. Directive 87/102/EEC)

The Council's common position was similar to the Commission's amended proposal, except that it took over the substance of the amendments proposed by Parliament. It only excluded the point on the transposition period. The Commission had preferred a period of two years after the entry into force rather than a fixed date, in order to enable the competent authorities and business operators to make the necessary adjustments. The key points of the common position were: - adoption of 'the EC formula'; - introduction of an additional recital recommending that immediate consideration be given to the need for further harmonization of the cost elements of consumer credit; - rejection of the proposal for a symbol (logo) accompanying the Annual Percentage Rate of Charge (APR) for consumer credit; - definition of the intervals between dates used in the calculations in years or fractions of a year, a year being presumed to have 365 days or 365.25 days or (for leap years) 366 days, 52 weeks or 12 equal months of 30.41666 days, i.e. 365 divided by 12; - accuracy of the calculation of the APR to at least one decimal. ?

Consumer credit: annual percentage rate of charge APR (amend. Directive 87/102/EEC)

In adopting the recommendation for second reading by Mrs Marlies MOSIEK-URBAHN (PPE, D), the European Parliament has approved the common position of the Council without making any amendments. ?

Consumer credit: annual percentage rate of charge APR (amend. Directive 87/102/EEC)

OBJECTIVE: to ensure the application of a single mathematical formula for the purpose of calculating the annual percentage rate of charge for consumer credit. COMMUNITY MEASURE: European Parliament and Council Directive 98/7/EC amending Directive 87/102/EEC for the approximation of the laws, regulations and administrative provisions of the Member States concerning consumer credit. SUBSTANCE: The principal element in the Directive is the obligation to apply a single mathematical formula ("the EC formula") for the purpose of calculating the annual percentage rate of charge for consumer credit. Important points include the following: - the desirability of studying without delay to what extent there is a need to harmonize even further the cost components of consumer credit; - the indication of the intervals between the dates used in calculations in years or fractions of a year, a year being deemed to consist of 365 days or 365.25 days or (in the case of leap years) 366 days, 52 weeks or 12 equal months of 31.41666 days, i.e. 365 divided by 12; - figures calculated for annual percentage rate of charge must be expressed to an accuracy of at least one decimal place. DEADLINE FOR TRANSPOSITION: 16/02/2000. ?
