Air transport safety, civil aviation: Community improvement strategy

OBJECTIVE: The Commission's working document seeks to define a strategy to enhance safety standards to be imposed on Community airlines and all third-country airlines operating in the EU. **SUBSTANCE:** The document provides in particular for the establishment of a European Aviation Safety Authority instructed to develop methods enabling systematic and efficient checks to be carried out on the safety of Community airlines, especially airlines flying third-country flags. Before the end of the year, the Commission will submit a formal proposal for the establishment of an authority of that nature. The action plan drawn up by the Commission, in cooperation with Member State experts, provides for measures to be taken at three levels; (a) by the Member States: they should immediately take the measures necessary to expand their national safety oversight activities and make them consistent with the collective assessment procedure; (b) the European Civil Aviation Conference (ECAC) and its associated body, the Joint Aviation Authorities (JAA) should rapidly finalize a comprehensive and workable Safety Assessment Procedure, establish a coordination mechanism for the centralization and dissemination of information received and prepare syntheses on foreign air carriers whose safety levels are suspect, set up specialist assessment teams for the audit of foreign air carriers and set up a European cooperation programme to assist third countries in improving their safety oversight capabilities; (c) by the European Commission itself: it says that it will present before the end of the year a proposal for a directive formalizing the safety assessment procedure to be followed by the Member States for the assessment of foreign air carriers. That directive should also include an obligation on Member States to ground aircraft found or suspected to be dangerous.?

Air transport safety, civil aviation: Community improvement strategy

The Committee called on the Commission to draw up a black list of third countries air carriers which do not meet EU safety standards. During the vote on the report by Mrs Anne McINTOSH (UK, EPP) on defining a Community aviation safety improvement strategy, the Committee took on board amendments concerning the provision of passenger smoke hoods, the installation of water mist systems and the fitting of externally mounted cameras to be pursued without delay. In addition the introduction of intra-Community rules for flight and duty time for aircrew and cabin crew and common training and licensing requirements for cabin crew and ground staff are recommended. The Commission's proposals for a European Aviation Safety Organization were warmly welcomed but Mrs McINTOSH said that an excessively bureaucratic organisation should be avoided.?

Air transport safety, civil aviation: Community improvement strategy

In adopting the report by Mrs Anne McINTOSH (PPE, UK), the European Parliament welcomed the Commission's submission of the communication on defining a Community aviation safety improvement strategy, which was a first step towards fulfilling the request by Parliament to prepare suitable measures. Parliament called on the Commission to draw up a 'black list' of third-country carriers which did not

meet EU safety standards, with the aim of refusing them permission to land or take off in the EU. Parliament also adopted a number of amendments concerning measures which needed to be taken as a matter of urgency but which were not mentioned in the communication: - establishment of mandatory incident reporting systems and of a European confidential system of voluntary incident reporting; - establishment of a European data bank on air accidents and incidents; - measures to reduce injuries in the event of an accident: impact protection, fire survivability, the provision of passenger smoke hoods, the installation of water mist systems, the fitting of externally mounted cameras and aircraft evacuation; - measures to reduce third party risk in the vicinity of airports; - measures to eliminate the worldwide trade in counterfeit spare parts; - regulation of the admission of personal luggage to cabins. In addition to the introduction of intra-Community rules on flight and duty time for aircrew and cabin crew, it was recommended that common standards be drawn up concerning the training and licensing requirements for cabin crew and ground staff. ?

Air transport safety, civil aviation: Community improvement strategy

There is a strong aspiration from European citizens for more safety in aviation at a time when the steady development of the activity, combined with the standstill of the accident rate, fuels a public perception of a decreasing level of safety. There is therefore an urgent need to improve global aviation safety, in particular, in certain regions of the world. The Community and its Member States have a leading role to play to achieve this objective and to assist third countries in applying the international safety standards. The Commission intends to take the following initiatives: - the conclusion of a Memorandum of co-operation with the ICAO: such a Memorandum will have for objective both to assist ICAO in implementing and enlarging its Universal Safety Oversight Audit Programme, and to provide ICAO's assistance to the Commission in order to secure consistent and coherent Community intervention for recovery projects supported by current financial instruments. Such agreement which will be only about funding and exchange of information is fully within the remits of Commission's powers as specified by article (302) of the Treaty. - the conclusion of similar arrangements with JAA and EUROCONTROL to assist future European Union members and some other third countries to conform to the Community's own requirements and ensure that JAA and EUROCONTROL standards are met in these States. - the allocation of increased resources from the existing co-operation programmes, in accordance with their own respective rules of procedure, to finance recovery actions as identified in co-operation with ICAO, JAA and EUROCONTROL; - the establishment of a co-ordination mechanism for recovery actions undertaken by the Community and its Member States through the creation of a committee composed of experts from the Commission, the Member States and European Industry, to be involved in the identification and financing of such actions. - the definition of a Community position regarding the creation of the ICAO International Financial Facility for Aviation Safety in order to ensure complementarity with European Community and Member States instruments. The Commission invites the Member States to complement Community action and take the following initiatives: - support ICAO in the implementation of the Universal Safety Oversight Audit Programme by ensuring that ICAO is given the financial and legal means to conduct systematic and mandatory safety audits. - take initiative to make use and strengthen the enforcement provisions of the ICAO Convention so as to privilege multilateral, rather than unilateral action to convince states, when necessary, to fulfil their international obligations in aviation safety. - increase their own financial assistance for the implementation of recovery actions identified as a result of ICAO audit activities. - participate in the coordination structure set up by the Commission to ensure consistency and complementarity of recovery actions, as well as best use of available resources.?
