Economic and social cohesion. 1st report

OBJECTIVE: This, the first Commission report on economic and social cohesion in 1996 concerns the impact of structural aid on economic and social development in the EU's regions. In particular, the document analyses the effects of the Structural Funds and the efforts made by the EU and the Member States to reduce regional disparities over the past ten years. One of the main lessons of the report is that whilst the development gap between Member States is tending to become narrower it is growing wider between the regions. **SUBSTANCE:** Social and economic fortunes - over the past decade, economic growth in the EU has averaged 2% a year, whilst employment has grown at only 0.5% a year. Disparities in per-capita income between Member States have narrowed significantly over the same period. This is largely because the cohesion countries (Spain, Portugal, Greece and Ireland) have caught up, with per-capita income rising from 66% to 74% of the Community average. Ireland has shown the most remarkable performance with an average annual growth rate of 4.5% between 1983 and 1995. The experience with regard to employment was more mixed. Across the EU as a whole, the incidence of unemployment have become much more uneven: from 1983 to 1993, the 25 regions with the lowest rates of unemployment were able to reduce their rate to 4.6% whilst the regions with the highest rates saw them increase to 22.4% of the workforce. - effect of the Community contribution on the different Member States: according to the document, the primary purpose of Community transfers is not to redistribute money. Instead they are intended to strengthen the economic base in the recipient regions, including human capital formation. EU structural policies have contributed to a significant narrowing of the gaps between poorer and richer Member States but not unfortunately between the regions themselves. The added value of the EU's structural policies mainly takes the form of innovation with undeniable advances in terms of environmental protection, creation of infrastructure, education and training. At the same time, income disparities between rich and poor regions widened (in the twenty-five best-off regions, per- capita income rose from 140% to 142% of the EU average whilst in the poorest regions it rose from 53% to 55%). The main role of Community support has been to help the Member States target resources on the most serious problems and the most severely affected regions. - Outlook: the EU faces major challenges including globalization, rapid technological change, EMU and enlargement. The Commission believes that the European model of society remains the most appropriate framework for confronting them. Market forces and entrepreneurial initiative are necessary as are solidarity and mutual support. Cohesion must therefore be further strengthened. The report avoids making concrete proposals for change. Rather, a number of themes are identified as a basis for further discussion. It does, however, provide several pointers for the future of cohesion policy: - how to secure sufficient investment (including human resource development); - how to favour job creation; - how to make national structural and social programmes more effective in coping with widening disparities. In any event, the Commission believes that cohesion policies must be more effective and better tailored to citizens' needs. Efforts must be concentrated on job creation, research and development, environmental protection and equal opportunities. Several issues remain outstanding

at EU level. The overriding one is how to improve the effectiveness of Community action: - scarce resources must be better targeted to the most serious problems; - the best combination should be made of subsidies and loans and public and private funds; - procedures should be simplified; - the respective roles of the Member States and the EU should be clarified and participation at regional and local level should be increased; - sufficient flexibility must be maintained in order to respond to new challenges and opportunities. The Commission also mentions the problem of additionality of EU transfers, the Member States' capacity for absorbing credit, and the problem of injecting more competition into the allocation of resources. Finally, it underlines the problem of the budgetary austerity programmes launched in the Member States. The main question is how to balance budgetary discipline with solidarity towards the poorest Member States and regions and towards the most disadvantaged regions and people in the wealthiest Member States. ?

Economic and social cohesion. 1st report

The opinion analyses the various chapters of the report and puts forward recommendations for the revision of the funds for the next programming period. ?

Economic and social cohesion. 1st report

The committee adopted the proposal for a resolution on the first three-year report on economic and social cohesion by 26 votes to 11. The rapporteur, Mr Juan de Dios Izquierdo Collado (PSE, E) opened by noting the absence in the Commission report of an up-to-date definition of cohesion and hence of an objective evaluation of its results. In detail, he accused the Commission of reducing cohesion to a purely economic concept, while the text adopted took account of indicators of both economic inequality, such as access to the labour market, and social inequality, such as education, vocational training and the exercise of social, cultural and democratic rights. In general, the rapporteur criticized the lack of ambition in this first report, which kept a low profile in the face of the 2000-2006 interinstitutional agreement and important events (EMU and enlargement) which would intervene once the new financial perspectives had been adopted. The rapporteur recalled that the European Parliament had voted in favour of incorporating a mechanism in the Treaty for coordinating repercussions at regional level of various Community policies in the form of jointly agreed guidelines in order to give concrete expression to Article 130B. Although he deplored the lack of scientific and technological cohesion in Europe and stressed that restrictive practices policy is the most resistant to economic and social cohesion, the rapporteur refrained from encouraging the renationalization of Community structural policy, convinced that harmonious development of the Union cannot be achieved through national policies. With regard in particular to the financial instruments of cohesion, the text adopted considered that the number of objectives needed to be reduced and efficiency and concentration increased, but without abandoning the objectives currently being pursued; on this point, the Commission's proposals in Agenda 2000 represented an initial basis for work. In conclusion, the report by Mr Izquierdo Collado, while against a reduction in the Structural Funds or the Cohesion Fund, endeavoured to highlight the aspects which needed to be developed and the priorities which needed to be included if the Structural Funds were to be more efficient instruments in the fight against regional inequalities and unemployment and respond better to the demands of the citizens of Europe. ?

Economic and social cohesion. 1st report

In adopting the report by Mr Juan de Dios IZQUIERDO COLLADO (PSE, E) on economic and social cohesion, the European Parliament first of all reiterates the fact that cohesion is an essential aspect of European integration. For this reason it is concerned at the frequent inconsistency and inadequate coordination of Community policies in terms of the objective of achieving economic and social cohesion in the Community. This applies first and foremost to the common agricultural policy (CAP), under which aid is concentrated on a small number of farmers and the sector is steadily declining. Parliament believes that aid should be more closely linked to cohesion and that a digressive scale for aid should be introduced, taking account of the size, location and income of each holding. The resources thus freed up would be used for rural development. Efforts should also be made with regard to fisheries, such that the regions heavily dependent on fishing can diversify. Regarding research, the Fifth Framework Programme should harmonize levels of technology so as to include the least-favoured regions. Every effort must be made to prevent peripheral and isolated regions becoming marginalized from the centres of economic activity. Parliament therefore calls for transport and communications policy to give priority to strengthening regional and local networks and to developing services of general interest so as to offer consumers a minimum of basic services at affordable prices. Regarding competition, measures must be taken to avoid distortions caused by State aid in certain sectors. The Commission should also produce an annual report on the regional effects of EMU. Parliament considers that EMU must be accompanied by additional structural support mechanisms to ensure it does not become an obstacle to the achievement of cohesion. It therefore calls for the continuation of a Cohesion Fund in its present form. As regards enlargement and its effect on structural policies, Parliament believes that adjustments will be necessary and that flexible transitional arrangements will have to be introduced in order to ensure the gradual integration of future applicant countries. A specific financial instrument should be established for the structural adaptation of these countries. Parliament believes that funding for the financial instruments for cohesion should be consolidated. In particular, it recommends a revision of the financial perspectives before enlargement, with restructuring of the budget. Concerning the instruments themselves, it believes there is a need to reduce the number of structural policy objectives (particularly by merging Objectives 3 and 4) and to simplify the relationship between fund and objective, either by using one fund for each objective or by standardizing fund administrative procedures. Preferential treatment must be given to Objective 1 areas and the most remote and island regions. Parliament also emphasizes the need for changes to the areas to be promoted under Objective 1, including definitive exclusion of industrialized urban areas from the eligible areas. Priority should also be given to innovative measures under the ERDF and to measures fostering equal opportunities. The results obtained through funding should be evaluated at the mid-term stage of the programming period, to allow any necessary review of the eligible areas. Parliament also proposes that programming should take the form of a contract, the parties to which would be local and regional authorities and the social partners. It calls for these parties to be better informed, and advocates decentralized administration and financial control. Controls by the national public authorities must also cover programmes and the arrangements for promoting them. The principle of additionality must be maintained, together with involvement of the private and voluntary sectors. Parliament emphasizes the need for structural policy priorities to be geared to improving the competitiveness of the economy, sustainable development and job creation. It is essential to support the development of SMEs and incorporate the urban dimension into the Structural Funds. A special place must be found for rural areas, as well as innovation and technological development. Energy (particularly renewable energy) and the environment must also be at the centre of the debate. Finally, Parliament emphasizes the importance of cohesion policy in fighting unemployment and social inequalities. ?
