Final act

Regulation 1998/1587 OJ L 208 24.07.1998, p. 0001 Summary
--

Fishery products: additional costs due to remoteness of Azores, Madeira, Canary islands, French Guiana

OBJECTIVE: to compensate the Azores, Madeira, the Canary Islands and Guiana for the additional costs (particularly transport costs) incurred in marketing certain fishery products from these regions as a result of their remoteness. **SUBSTANCE:** The Azores, Madeira, the Canary Islands and Guiana, which are very remote, face considerable difficulties in the fisheries sector, which is one of main sources of income for local people. These difficulties are particularly aggravated by additional costs arising from transport of fisheries products due to their isolation and remoteness. In order to compensate for loss of income to local producers and preserve their competitiveness in relation to Community producers, the Community introduced a compensation scheme with effect from 1992 (to 1997). These measures have been so successful that the Commission proposes extending the existing arrangements from 01.01.1998 for certain fishery products, namely: -tuna and demersal

species from the Azores, -tuna, black scabbardfish and mackerel from Madeira, -tuna, sardines, mackerel, aquaculture products, cephalopods, sole and sea-bream from the Canary Islands, -shrimps from Guiana. The scheme provides for different amounts of compensation to be paid per type of fish and region. The measures are financed from the Guarantee Section of the EAGGF. A report on the implementation of the Regulation must be submitted to all the Community institutions every 3 years as from 01.01.2001, together with any proposals for altering the scheme.?

Fishery products: additional costs due to remoteness of Azores, Madeira, Canary islands, French Guiana

The committee has adopted the report by Mr M. Manuel MEDINA ORTEGA (PSE, E) on the proposal for a regulation introducing a scheme to compensate for the additional costs associated with the very remote location of certain regions. The objective of the amendments is, first of all, to include in the list of regions covered (Azores, Madeira, Canary Islands and Guiana) the French Department of Réunion, for tuna and swordfish. While maintaining the global amount of the subsidy, quotas for tuna, sardine and mackerel intended for freezing should be reduced, and those for fish intended for processing increased. In connection with this report, MEPs received a delegation of fishermen from Guiana, who proposed, so as to ensure the protection of juvenile fish, that aid in respect of prawns (prawn trawlers account for nearly half the Guianan fleet) should focus on supporting quality (large and, to a lesser extent, medium-sized prawns) rather than quantity (small prawns). This proposal was favourably received by the committee. ?

Fishery products: additional costs due to remoteness of Azores, Madeira, Canary islands, French Guiana

In adopting the report by Mr Manuel MEDINA ORTEGA (PSE, E), the European Parliament expressed itself in favour of the inclusion of the French Department of Réunion in the list of outermost regions (Azores, Madeira, Canary Islands and Guiana) for which a system of compensation for additional marketing costs is envisaged, in the case of tuna and swordfish. While keeping the overall amount of aid for this at the same level, Parliament's amendments reduced the quotas for tuna, sardines and mackerel intended for freezing and increased the quota for fresh fish intended for processing. Parliament called for it to be made possible for aid to prawn-fishing to vary in relation to the size of the prawns caught, without altering the overall budget allocation for such aid. At the same time it called for an annual report to be drawn up on the impact (particularly financial) of the Regulation.?

Fishery products: additional costs due to remoteness of Azores, Madeira, Canary islands, French Guiana

The Commission has incorporated in its amended proposal most of the amendments adopted by Parliament at its January 1998 session which aim to include the Island of Réunion in the list of regions benefiting from the compensation system for the most remote regions. More specifically, the amendments are concerned with: - extending the regulation to include the island of Réunion and defining the system applicable to this French department (payment of ECU 1000 per tonne for tuna and swordfish fished in Réunion for a maximum quantity of 1000 tonnes per year), - including a reference to the species originating from this island (tuna and swordfish), - prohibiting fishing for shrimp in Guyana at a depth of less than 30 metres, - introducing a new provision making it possible to adjust the amounts set for the various species in the light of their marketing conditions and characteristics, - adjusting the quantities of fresh and frozen tuna and frozen and processed sardines and mackerel from the Canary Islands. The Commission did not, however, accept the amendments concerned with: - the technical arrangements applying to the species in question, - the provisions on the amount of aid (the relevant amendments are in the financial statement annexed to the proposal), - the report to be submitted to the European Institutions concerning the financial aspects of the regulation. ?

Fishery products: additional costs due to remoteness of Azores, Madeira, Canary islands, French Guiana

OBJECTIVE: to grant aid to the most remote areas of the Azores, Madeira, the Canary Islands, Guyana and Réunion to compensate for the additional costs incurred in marketing certain fisheries products in these regions (particularly transport costs). **COMMUNITY MEASURE:** Council Regulation (EC) 1587/98 introducing a scheme to compensate for the additional costs incurred in the marketing of certain fishery products from the Azores, Madeira, the Canary Islands and the French departments of Guyana and Réunion as a result of those regions' remoteness. **SUBSTANCE:** The most remote regions of the Azores, Madeira, the Canary Islands, Guyana, and Réunion face major problems in the fisheries sector, which is one of the main sources of income for the local populations. These problems are exacerbated by the additional costs of transport of fisheries products because the areas are isolated and remote. With a view to compensating local producers for loss of revenue and maintaining their competitiveness against Community producers, the Community introduced measures in 1992 (until 1997) to compensate for these additional costs. As those measures were successful, this regulation continues from 1 January 1998 to 31 December 2001 the system of compensation for the following fisheries products: - tuna and demersal species from the Azores, - tuna, black scabbard fish and mackerel from Madeira, - tuna, sardines, mackerel, aquaculture products, cephalopods, sole and sea bream from the Canary Islands, - shrimps from Guyana, - tuna and swordfish from Réunion. The scheme provides for payment of compensatory amounts depending on the type of fish and the region concerned. The amounts vary according to the marketing conditions of the products concerned and their individual characteristics. With a view to rationalising fisheries resources, provisions are included to prohibit fishing for shrimp in Guyana at less than 30 metres. The measures are financed by the EAGGF guarantee section. A report on implementation of this regulation is to be submitted to all the Community Institutions by 1 June 2001, with any proposals for adjusting the system. **ENTRY INTO FORCE:** the regulation enters into force on 24/7/1998. It is applicable retroactively from 1/1/1998 until 31/12/2001. ?

Fishery products: additional costs due to remoteness of Azores, Madeira, Canary islands, French Guiana

This document consists of the report from the Commission on implementation of the scheme to compensate for the additional costs incurred in the marketing of certain fishery products from the Azores, Madeira, the Canary Islands and the French departments of Guiana and Reunion as a result of those Regions' remoteness Article 6 of Council Regulation 1587/98/EC introducing a scheme to compensate for the additional costs incurred in the marketing of certain fishery products from the Azores, Madeira, the Canary Islands and the French departments of Guiana and Reunion as a result of those regions' remoteness, as amended by Regulation 579/2002/EC, requires the Commission to submit a report to the European Parliament, the Council, the Economic and Social Committee and the Committee of the Regions on the implementation of the measures provided for therein, together, where appropriate, with suitable proposals. In accordance with that provision, the present report describes the results of operating the support scheme for marketing of certain species produced in the regions concerned. It also discusses the constraints currently faced by the fishery sector as regards the species which are marketed in significant quantities and outlines the prospects for Community action in this field. By Decisions 89/687/EEC, 91/314/EEC and 91/315/EEC, the Council has instituted programmes of specific options for addressing the remoteness and insularity of these regions, creating a suitable framework for the adoption of measures in the various sectors of activity which require particular attention as regards the strengthening of the Community support necessary for alleviating the permanent constraints which characterise these regions (Poseidom, Poseican and Poseima programmes). These programmes are designed to take account, in implementing Community policies, of the special characteristics and handicaps of these regions in connection with their remoteness and insularity. Their economic dependence on a small number of products, their limited markets, their dual nature as both Community regions and as territories situated in an environment of developing countries thus affect the economic and social life of these regions. Symbolising Community solidarity with the outermost regions, and essential to their integration into the internal market, these programmes were conceived as frames of reference for the implementation of Community policies in these regions. The report states that the current scheme adopted by Council Regulation 1587/98/EC recognises that the difficulties facing the fishery industry of the European Union are aggravated in particular by the cost of transporting fishery products to markets as a result of the remoteness and isolation of the outermost regions. It also recognises that programmes of options specific to the remote and insular nature of these regions form part of the Community's policy to assist them, taking account of the constraints to which they are subject and their specific development problems, and emphasises that non-industrial and inshore fishing is important from the social and economic viewpoints. Throughout its operation, the scheme has afforded lasting stability which has allowed the economic players concerned to cooperate under conditions similar to those enjoyed by their counterparts on the European mainland. The scheme has made a contribution to maintaining employment in regions where there are very few other opportunities. The benefits these operators have derived from the scheme have enabled the various sectors concerned to maintain an adequate level of output and development. The conditions giving rise to the additional production costs will not change, since they derive from the very nature of the outermost regions. In the regions to which this scheme applies, production and marketing conditions in the fishing sector have evolved as described in the previous chapters. Given this development, consideration should be given to adapting the legal framework of the scheme, thus ensuring that the goals for which it was established continue to be properly attained.?
