## Environment: Europe-Asia cooperation strategy

**OBJECTIVE** : achieving more effective cooperation between Europe and Asia in the field of the environment and proposing key measures in this area to achieve long-term results. **SUBSTANCE** : The severity of the environmental problems in Asia have implications for Europe (particularly with regard to economic stability and business opportunities). It is therefore necessary to help the Asian countries protect their natural resources and prevent pollution. Europe has a great deal of experience in this field with nearly 60% of the world patents in environmental technology especially in the urban environment and in pollution reduction and prevention. There is currently no monitoring system covering all environmental cooperation measures taken by the Member States in Asia. The communication therefore proposes the introduction of a voluntary system of coordination involving all European undertakings cooperating or wishing to cooperate with Asia in this area. The strategy proposed by the Commission is based on three lines of action: 1) increasing environmental management capacity in Asia, encouraging more efficient and sustainable use of natural resources and supporting a more sustainable pattern of wealth creation; 2) facilitating market-based approaches to environmental protection with emphasis on pollution reduction and prevention and protection of natural resources; 3) developing, promoting and supporting Europe-Asia environmental R&D networks and facilitating the rise of environment awareness and training. In order to implement this strategy, the Commission proposes four criteria for pursuing cooperation activities: - mutual interest for Europe and Asia, - complementarity with Member States' activities, - synergy with international donors and lending agencies, - sustainability. The Community should develop with each Asian country or region concerned specific environmental priorities based on their needs. The Community strategy based on the three pillars should set out to identify the countries most serious problems and pursue a dialogue on environmental aspects of mutual interest with local beneficiaries. It should also endeavour to promote a participatory approach, increase awareness of the importance of the environment, improve capacity building programmes and assist European companies active in this area. ?

## Environment: Europe-Asia cooperation strategy

EU companies must comply with a high level of environmental standards in Asia as well as Europe, the Committee said when it unanimously adopted a report on environmental cooperation between Europe and Asia. The non-legislative report drafted by Mrs Lone DYBKJAER (ELDR, Dk) in response to a Commission communication on the subject called, in a resolution, for a code of conduct setting out the environmental standards which EU undertakings should uphold when operating in Asia. While welcoming the communication, the resolution regretted that the Commission had focused on the export-led industrializing countries of Asia and took the view that a cooperation strategy should concentrate more on developing countries in the south of Asia and should lead to sustainable development. It noted that whereas most of the environment problems in the EU were caused by a high level of consumption, in Asia many environmental problems were caused by poverty. Specific initiatives were needed for the poorest sectors. The resolution stressed that EU/Asia cooperation should help Asian countries fulfil their obligations under international agreements such as Agenda 21, the Convention on Biological Diversity, the Montreal Protocol, etc. In its financial agreements with Asian countries, the EU should impose conditions relating to environmental management. The European Investment Bank should have clear policies concerning the environmental impact of its operations.?

## Environment: Europe-Asia cooperation strategy

In adopting without debate the report by Mrs Lone DYBKJAER (ELDR, DK) on a Europe-Asia cooperation strategy in the field of the environment, Parliament agreed with the principles set out in the Commission communication but was surprised at the lack of concrete suggestions in the document. It therefore intended to stress the measures the Commission should take to that end. In particular it wished a stronger commitment to combat climate change and a clear linkage to the clean technology and technology transfer schemes agreed at Kyoto. It regretted the Commission's focus on the export-led industrialising Asian countries and affirmed that a cooperation strategy should actively include the South Asian developing countries to a greater extent and should seek sustainable development. The strategy proposed should also help the Asian countries to fulfil the obligations derived from international agreements such as Agenda 21, the Convention on Biological Diversity, the Montreal Protocol, etc. Parliament noted that the actions proposed failed to reach the poorest sections of the population and called for specific initiatives. The European Investment Bank should have clear policies concerning the environmental impact of its operations. At the same time Parliament hoped that European Union companies would comply with a uniformly high level of environmental standards. It called for a code of conduct containing environmental standards which European Union companies should uphold when carrying out activities

in Asia. It also called on the Commission to develop plans to assist capacity building in national, regional and local government administrations in Asia with regard to environmental management and it stressed the need to support Asian governments in the reducing of administrative deficiencies in this area. Parliament considered it a matter of urgency to integrate experiences from existing programmes into the cooperation process (e.g. the EU-China cooperation programme). With regard to financing, Parliament hoped that public and private funding would be involved with some specific European funding. The programmes financed should be subject to continuous evaluation and should have direct effects on biodiversity. The Union should also, in the financing agreements which it concludes with the Asian countries, impose environmental management conditions. Parliament considered in particular that it would be more efficient to gather together all budgetary elements concerning the environment and cooperation with Asia with a framework programme. It pointed out that water pollution was responsible for more than 500 000 infant deaths a year in Asia and stressed that a significant part of the programme should be devoted to air pollution and renewable sources of energy. It also hoped that more consideration would be given to the problem of forest fires (in particular in Indonesia). Lastly Parliament hoped that in both Asia and Europe the Commission would act to promote greater public awareness of environmental problems and called for a report evaluating the implementation of the strategy after a period of three years. ?
