## Trans-European transport network: progress and implementation of the 14 Essen projects, December 1994. 1998 report

PURPOSE : This report concerns the trans-European transport network and provides an update on the progress and implementation of the 14 projects decided in Essen. PURPOSE : The Luxembourg Council of 20-21 November 1997 emphasised the importance of the trans-European Networks (TENs) as one of the major ways of supporting growth in the EU, and an essential complement of the single market. The Luxembourg Council asked that a timetable and financial plan be completed for each of the fourteen specific projects. Member States have now identified timetables and projected investment costs for the priority projects. This report provides an overall assessment. Each of the projects has its own specific features, and it is difficult to make general statements, according to the Commission. Taken overall, however, there has been significant progress : three of the projects are close to completion (conventional rail link between Cork, Dublin, Belfast, Larne; Malpensa Airport, Oresund fixed link) all are under construction or at an advanced state of preparation and most are likely to be completed by around 2005. There has, however, been some slippage due to : - the intrinsic complexity of the projects, which means that some of the timescales proposed were unrealistic, given the technical, legislative and administrative hurdles and the need to give full consideration to the environmental implications; -constraints on the availability of public finance at a time of rigorous budgetary consolidation. Given these constraints, the fact that most of the projects are now firmly on track, with only limited slippage, is a significant achievement, as is the recent passing of some major milestones such as the first completely high speed link between European capitals (Brussels to Paris) inaugurated in December 1997. EU level finance has made a major contribution to the priority projects. This is particularly the case for the projects in areas eligible for Structural and Cohesion Fund spending (Ireland and Greece). The TEN Transport budget, with more modest amounts available (around 1.8 BECU 1995-99) has nonetheless had a considerable impact in helping to launch major projects such as the Oresund fixed link and the Belgian high speed train. The EIB is a major source of loan funding for TENs projects, advancing 1.4 BECU to the 14 priority projects in 1997 alone, while the EIF committed exposure towards the priority projects has reached around 350 million ECU. The timetables submitted by the Member States suggest that there will be a very substantial increase in expenditure on the 14 priority projects during the 2000-2006 period, with many of the larger projects moving into the full construction phase. According to the Commission, this could result in investment at close to double the level seen in 1995-99. In a number of cases, the Community contribution will be a determining factor in the financial viability of the project. The Commission also intends to continue its efforts to make Community support as effective as possible by concentrating funds on key projects. The EIB's increasing willingness to develop its loan instruments so that they are better suited to the timescale and risk profile of individual projects will play an important role, not least in the development of financing packages for public-private partnerships. A major effort is needed to prepare for the extension of TENS to the accession countries, for which ISPA will be the main instrument for EU grant funding from 2000.?

## Trans-European transport network: progress and implementation of the 14 Essen projects, December 1994. 1998 report

The European Commission submitted its "1997 annual report on trans-European networks (TENs)" to the European Parliament, the Council, the Economic and Social Committee and the Committee of the Regions pursuant to article 16 of Regulation 2236/95/EC on financial assistance for trans-European networks. Following an assessment of the main developments in TENs in 1997, the Commission document emphasises that significant progress has been made in several TEN projects in all three sectors and highlighted the following points: a) Legal aspects: - amendment of article 129 C (1) and 129 D of the Treaty of Amsterdam; - telecommunications guidelines adopted; - list of TEN projects of common interest in the energy sector and their specifications updated; - Commission proposal to extend the programme on the interchange of data between administrations (IDA); - Commission proposal to amend the guidelines on TENs in the transport sector in order to include sea ports, inland ports and intermodal terminals. b) Funding: - publication of the Agenda 2000 confirming the priority nature of TEN funding for the next financial period; - recommendations by the High Level Group on measures to facilitate public/private partnerships within the framework of projects in the transport sector; - Commission communications concerning the general implementation of recommendations on aspects relating to competition; - examination of EIB action to support TENs; - recommendation that each "priority" transport project keep to a suitable timetable and financial plan. c) Enlargement and external relations: - Agenda 2000 emphasised the importance of TENs in creating new links with applicant countries; - the third pan-European conference on transport (Helsinki) allowed the addition of an extra corridor and four transport zones, the strengthening of multi-modality and the importance of intelligent transport systems; - publication of two communications concerning links between transport and energy systems in the European Union and neighbouring countries; - the transport infrastructure needs assessment (TINA) has reached cruising speed with the implementation of the technical secretariat in Vienna.?

## Trans-European transport network: progress and implementation of the 14 Essen projects, December 1994. 1998 report

---

Rapporteur CAMISON ASENSIO notes that the progress and implementation of the 14 TENs projects, decided at the Essen Summit in December 1994, is far from being satisfactory. He therefore calls on the Commission and the member states concerned to take a wide integrated range of measures related to the funding of these projects, to enable them to make progress (private/public partnership, forms of long-term funding, availability of venture capital etc). The Council should convene an extraordinary European Council for the purpose of finding solutions to the problems. With regard to the state of progress on the 14 priority projects, three have reached the final stage: - the rail link Cork-Dublin-Belfast-Larne-Stranraer (project 9) - the Malpensa airport (project 10) - the Oresund fixed road/rail link (project 11). Six projects will be completed in 2005 with their funding largely guaranteed: - the HST link Paris-Brussels-Cologne-Amsterdam-London (project 2) - the two parts of the HST South link: Madrid-Barcelona-Perpignan-Montpellier and Madrid-Vitoria-Dax (project 3) - the HST East link (project 4) - the Betuwe line (NL) combined transport/rail link (project 5) - the Greek motorways project (project 7) - the West Coast Main Line rail link (UK) (project 14). Five projects will be completed only after 2005, but their timetables and funding remain uncertain: - the HST North-South link (Brenner axis) (project 1) - the Lyon-Trieste HST link (project 6) - the multimodal link between Portugal and Spain and the rest of Europe (project 8) - the Nordic triangle multimodal corridor (project 12) - the Ireland-UK-Benelux road link (project 13). The Committee responsible adopted an amendment, emphasizing that the proposal on project 8 (Spain/Portugal) as amended by the Spanish and Portuguese governments must be put to the codecision procedure with Parliament. In another amendment, the Commission and member states concerned are urged to speed up the preparations to the CTRL, the British part of the Paris-Brussels-Cologne-Amsterdam-London HST and the Betuwe line, including the northern section and in connection to the German network.?

## Trans-European transport network: progress and implementation of the 14 Essen projects, December 1994. 1998 report

---

The resolution on the Commission report: "Trans-European Network: Report on progress and implementation of the fourteen Essen projects, 1998" was approved without debate by the European Parliament. This report, by Felipe Camisón Asensio (PPE,ES) expresses the Parliament's regret that for five of the fourteen projects, both timetables and funding remain in doubt and that the Commission communication apparently accepts this state of affairs. It urges the Commission and Member States to make every effort to speed up progress on these projects and stresses the need for Member States to maintain public investment in the transport TENs. The report also reaffirms the need for a wide range of integrated measures related to the funding of these projects, to enable them to make progress and finally calls on the Council presidency to convene a joint meeting of the Councils of Transport and Finance Ministers, to find solutions to the problems relating to the timetables and funding for the transport TENs as a whole.?
