European Central Bank ECB. 1999 report

PURPOSE: presentation of the European Central Bank's Annual Report for 1999. **CONTENT:** the European Central Bank's annual report is the first to cover a full year Eurosystem monetary policy. It also deals with the other activities of the Eurosystem and the European System of Central Banks. Looking back on the first year of the euro, there are some grounds for satisfaction. The single monetary policy started under reasonably favourable conditions. The Eurosystem's monetary policy strategy proved to be a valuable tool both for making monetary policy decisions and in explaining these decisions to the general public. Throughout the year, the Eurosystem was therefore able to focus on maintaining the environment of price stability, with inflation running on average at just over 1%. The Eurosystem will, therefore, continue to explain the importance of its primary objective of maintaining price stability in the euro area. The report also stresses that the introduction of the euro, in particular the technical aspects of the process, took place smoothly. The first weeks of January 1999 saw the integration of the money markets of the euro area. The Eurosystem's operating framework, with its use of refinancing operations, standing facilities and a minimum reserve system with an averaging provision, functioned remarkably well. Overnight interest rates were generally very stable without the need to resort to fine-tuning operations. The economy of the euro area is now entering a crucial phase. A golden opportunity to achieve substantial reductions in the level of unemployment throughout the euro area and to revitalise the economy is arising, now that economic growth is accelerating in a climate of price stability. This opportunity can only be seized if policy-makers make the right choices and the private sector is confident about the future and thus dares to take initiatives: - a strong focus on maintaining price stability in the medium term is the best contribution that monetary policy can make to reducing unemployment and boosting the confidence of citizens in their currency; - the budgetary authorities should reduce their budget deficits to close to balance, or even create surpluses; - governments should undertake structural reforms enabling markets to operate more flexibly; - in wage negotiations, social partners should take into account the importance of maintaining price stability, the growth of productivity, the need to reduce unemployment and the fact that different local circumstances require differentiated wage developments. The report also highlights the importance of the need to make progress with the integration of capital markets, in particular by means of measures that ensure fair competition. The same applies for the creation of an internal market for financial services. A solid regulatory framework will need to be adopted to govern the issue of electronic money.?

European Central Bank ECB. 1999 report

The committee adopted the report by Alexander RADWAN (EPP/ED, D) on the European Central Bank's 1999 annual report. The committee gave clear support to the Bank, welcomed its convincing stability policy and noted its success in fighting inflation and establishing market credibility. It also congratulated the Bank on its improvement in information policy. The committee agreed with the Bank on the need to use the cyclical upturn to further reduce budget deficits and debt levels and to speed up structural reforms. In addition, it called on the Member States to use this economic situation to achieve balanced budgets in the coming year, earlier than originally planned. Regarding the reasons for the weak euro, the report stressed the need to improve the competitiveness of the euro-zone and expressed concern at the decisions of some countries with regard to working hours, which had made labour markets more rigid and might have contributed to a weakening of the economy of the euro-zone. As for the enlargement process, the committee noted that future EU membership would lead to full participation in monetary union, based on "strict" compliance with the convergence criteria, and stressed the desirability of a "high level of convergence in the real economy" to limit the strain to both existing members and applicant countries. ?

European Central Bank ECB. 1999 report

The European Parliament adopted a resolution drafted by Alexander RADWAN (EPP/ED, Germany) on the 1999 Annual Report of the European Central Bank (ECB). The ECB is congratulated on its stability policy, securing an all-time low rate of inflation in the Euro zone countries, as well as on the low interest rate. Parliament urged it to adopt two further transparency measures: publication of the minutes as soon as possible after each meeting giving arguments for and against monetary policy action (although not covering votes) and publication of a regular report on the economic situation (including productivity growth and sustainable earnings increases) in each euro area Member State. The latter are urged to use the cyclical upturn to reduce budget deficits and accelerate the reduction of debt and support the ECB's stability policy by speeding up structural reforms in the markets for goods, services and capital, labour markets and social insurance systems. Member States should be able to achieve balanced budgets or surpluses earlier than originally planned. Parliament is not concerned about the fall in the value of the euro so much as the structural problems within the euro area economy, and the lack of dynamism within the EMU economy. The competitiveness of the euro area must be increased. The moderate wages policy within the euro area so far is welcomed. With regard to enlargement, Parliament stressed the need for a high level of convergence in the real economy in order to limit the strain involved, both for the Community and for the applicant countries.?
