## Air pollution, greenhouse gas emissions: European climate change programme, ECCP

**PURPOSE:** To outline the EU policies and measures to reduce greenhouse gas emissions in the framework of a European Climate Change Programme (ECCP). **CONTENT:** In view of respecting the commitments undertaken by the EU at the Kyoto conference, action - both at Member state and Community level- will have to be reinforced. In order to do so, the Commission will follow a twin-track approach: the reinforcement of Community-wide policies and the development of emissions trading system within the EU to enhance the cost effectiveness of the EU's implementation strategy, including the preparation for the use of the Kyoto Protocol's flexible mechanisms. A strengthening of common and co-ordinated policies and measures for all major greenhouse gas emitting sectors will be facilitated through the integration of environmental aspects into sector policies such as those for energy, transport, agriculture, industry, internal market and development, where strategies are being developed. In addition, the European Council in its conclusions of October 1999, urged the Commission to put forward a list of priority action to climate change as early as possible in 2000 and to prepare appropriate proposals in due course. In response to these requests, the Commission is now putting forward a list of proposed common and co-ordinated policies and measures. The list is not exhaustive but rather focus primarily on priority actions in the energy, transport, and industry sector. It could be adjusted however, following discussions in Council and EP and decisions taken concerning different sector policies such as those for energy, transport, industry and agriculture. The main objective of the ECCP to be initiated by the Commission is to identify and develop all those elements of a European Climate Change strategy that are necessary for the implementation of the Kyoto Protocol. Through a co-operative effort of all relevant stakeholders such as representatives of the Commission, the Member states, industry and the NGO community, the programme will undertake preparatory work for the Commission to propose in due course concrete policy proposals to Council and the EP. In order to launch the programme, a Steering Committee will be set up, comprising all Commission services that take part in the ECCP. It should be responsible for the overall management and co-ordination of the ECCP both in terms of policy approach and organisation. The Committee will create working groups on specific problem areas and will decide on their terms of reference and timetable on the basis of a proposal by the relevant Directorates General. The working groups (WGs) will work to an agreed timetable. Main elements of the work programmes will include assessments of the environmental and cost implications of policies and measures as well as their compatibility with the sector integration policies. On the basis of these assessments, policy recommendations can be made to the Commission. Each WG will have its specific 'set of stakeholders' representing a European rather than a national or regional clientele. The WGs will have a limited size and will consist of approximately 15 persons. Finally, each WG will regularly report to the Commission through its chairperson. A written interim report will be requested after 6 months and a final report after 2 months. The final report will propose policy-oriented conclusions outlining the nature, scope and content of the policies and

measures to be considered at Community level. On this basis, the Commission will be in a position to prepare concrete policy proposals containing instruments such as technical regulation, voluntary agreements or flexible mechanisms.?

## Air pollution, greenhouse gas emissions: European climate change programme, ECCP

---

In view of the intensification of negotiations in the run up to the sixth Conference of the Parties (CoP6) to the 1992 United Nations Framework Convention on Climate Change (UNFCCC), the Council adopted the following conclusions: 1. The Council reaffirms its commitment to the successful implementation of the Buenos Aires Plan of Action and a successful outcome at CoP6. At the same time the Council stresses the importance of creating the conditions for the ratification and entry into force of the Kyoto Protocol by 2002 at the latest. In this context, the Council urges the Commission to present it with a proposal for the conclusion of the Protocol by the Community in March 2001. 2. The Council underlines the importance of the adoption at CoP6 of a strong and comprehensive compliance system, clear and effective rules for the three Kyoto mechanisms and the handling of sinks which ensure real reductions of the overall greenhouse gas emissions of the Annex I countries and thereby the environmental integrity and credibility of the Protocol, as well as the further elaboration and implementation of modalities and procedures for co-operation with developing countries and countries with economies in transition in the context of the UNFCCC (United Nations Framework Convention on Climate Change). 3. The Council considers that the compliance system should incorporate the necessary elements to ensure that the commitments are complied with; include a body which is able to determine non-compliance, suggest measures to enhance compliance and apply strict consequences for non-compliance, in particular with the targets set out in Article 3.1 of the Kyoto Protocol, with a clear economic impact on Parties so as to both discourage non-compliance and compensate for damage to the environment. In this context, the Council supports a Compliance Fund, a Compliance Action Plan and loss of access to the Kyoto mechanisms as strict consequences for non-compliance with Article 3.1 of the Protocol and will continue to develop its views on this issue. In this regard the further development of a compliance reserve shall be explored. 4. The Council considers that the decision on principles, rules, modalities and guidelines for the use of the Kyoto mechanisms must include criteria for participation in each of the mechanisms, criteria for complementarity and for the eligibility of projects. 5. The Council also believes that CoP6 should define eligibility criteria for participation in the Kyoto mechanisms. In particular, a clear definition of projects eligible under the clean development mechanism (CDM) is needed in order to achieve its potential in terms of both greenhouse gas emissions reductions and sustainable development in non Annex I countries. In order to allow for a prompt start of the CDM, CoP6 should adopt a positive list of safe, environmentally sound eligible projects based on renewable energy sources, energy efficiency improvements and demand side management in the fields of energy and transport. 6. The Council reaffirms its willingness to continue to work with other Parties to clarify the treatment of sinks in the Kyoto Protocol. 7. The Council also emphasises that any decision on definitions, methodologies and accounting rules should be consistent with sustainable forest management, including the conservation of biological diversity. 8. The Council recognises the importance of cooperation with developing countries and countries with economies in transition in the context of the Climate Change Convention. It commits itself to concrete actions in the co-operation with these countries in the area of climate change, that link capacity building, technology transfer and adaptation/mitigation measures. These should be based on sectoral approaches, where appropriate, and integrated with other sustainable development objectives. 9. The Council believes that there is a need to promote new investments to generate additional resources, strengthen co-ordination of existing bilateral and multilateral actions and, where possible, make full use of co-operation schemes with innovative financing. The Council asks the Commission to indicate how Community budgets, programmes and funds can be geared towards measures to support the accession countries in meeting the Kyoto commitments. 10. The Council notes with concern the current trend of greenhouse gas emissions in the European Union, as assessed in the Commission's communication. It emphasises the importance of strengthening national action to reduce greenhouse gas emissions, complemented by common and co-ordinated measures at the Community level. The Council supports the approach followed by the Commission which aims at reinforcing policies and measures at Community level as soon as possible and at exploring proposals for developing emissions trading within the European Union. 11. The Council welcomes the Commission's proposal for a European Climate Change Programme (ECCP). Participation of relevant stakeholders, in particular Member States, in the preparatory work for future Commission proposals can increase acceptance of such proposals and thereby contribute to a more timely adoption of such measures. Based on the results of the programme, the Council urges the Commission to come forward with appropriate proposals as early as possible in 2001. The Council invites the Commission to report on progress made at its meeting in November 2000. 12. The Council recognises that far greater limitation and reduction efforts will be necessary in the next decades. It therefore underlines the need for further negotiations on the subsequent commitment periods and a longer term process to broaden participation. The discussion on what additional action is required to meet the ultimate objective of the Convention should begin at CoP7 in the light of the IPCC Third Assessment Report which is to be released in 2001.?

## Air pollution, greenhouse gas emissions: European climate change programme, ECCP

---

The committee adopted the report by Jorge MOREIRA DA SILVA (EPP-ED, P) on the Commission communication on EU policies and measures to reduce greenhouse gas emissions. The report welcomed the Commission's plan for progress towards a European Climate Change Programme (ECCP) but stressed the need for the speedy introduction of legally binding measures to oblige Member States to keep to their quotas. The Commission was urged to put forward a draft directive as soon as possible after the meeting of the 6th Conference of Parties (COP-6) to the Kyoto Protocol (due to take place at The Hague in November 2000) providing for sanctions to be imposed in cases where emission quotas were exceeded. The committee also compared the communication unfavourably with the more ambitious Green Paper on emissions trading within the EU, which was submitted at the same time. The communication, it said, amounted to little more than an organisation chart for the ECCP and a strategically weak list of policies and measures, with the result that the latter were being relegated to an unacceptably insignificant role in the EU's greenhouse gas emission abatement strategy. Moreover, the ECCP itself had been defined merely as a consultative body and not as a strategically oriented policy tool. It therefore called on the Commission to complete the ECCP and come forward with specific proposals for the implementation of policies and measures, within six months after the COP-6 meeting. The committee also felt that the greenhouse problem should be included in the current assessment of the CAP and called for agriculture to be included in the Climate Change Programme. It also reiterated its view that there should not only be a world-wide limit on emissions but also a global 50% ceiling on the use of the flexible mechanisms provided for in the Kyoto Protocol. Lastly, it believed that the Protocol should be ratified under the assent procedure, provided that COP-6 produced a result acceptable to the EU.?

## Air pollution, greenhouse gas emissions: European climate change programme, ECCP

---

The Council recalls its support for the development of the European Climate Change Programme (ECCP) and its agreement that priority actions should be taken in the field of transport, energy and industry. The Council has considered a list of priorities of action defined by the Commission in its communication of 8 March 2000. The Council have selected issues that have particular importance for both European Community and Member States climate change strategies and need to be considered as a priority with a view to providing significant effects in the 2008-2012 period as well as to show demonstrable progress by 2005. The Council encourages the Commission to make progress and to propose concrete measures, especially within the framework of the European Climate Change Programme taking into account, inter alia, the environmental and cost-effectiveness of the measures. In addition, the Council emphasises the need for urgent decisions on proposals already under examination, in particular the draft Directive on the promotion of electricity from renewable energy sources in the internal electricity market, the framework for energy product taxation, and the measures under discussion in the field of freight transportation. In the field of transport, the Council requests the Commission to study and prepare measures for various issues including reduction of CO<sub>2</sub> from vehicles, reduction of all greenhouse gas emissions from air conditioning vehicles, etc. The Council highlights the need to reduce emissions from power and heat production; reduce emissions of HFCs, PFCs and SF<sub>6</sub>. The importance of consistency between climate change policies at EU and national levels and the guidelines on environment and state is stressed. Moreover, the Commission is invited to include an analysis of economic measures in the context of common and coordinated policies and measures within the ECCP. The Council underlines the importance of considering adaptation of taxation on energy saving products and services, in order to create appropriate incentives for the consumer.?

## Air pollution, greenhouse gas emissions: European climate change programme, ECCP

---

The European Parliament adopted by 443 votes for, 1 against and 28 abstentions for the resolution drafted by Mr Jorge MOREIRA DA SILVA (EPP/ED, P) on the communication on EU policies and measures to reduce greenhouse gas emissions: Towards a European Climate Change Programme (ECCP). (Please refer to the previous decisions of the Committee responsible).?
