EAGGF, implementation of the budget. Special reports 1/1999, 2/1999, 1/2000, 8/2000, Court of Auditors

PURPOSE : to present the special report from the Court of Auditors 1/1999 concerning the aid for the use of skimmed milk and skimmed milk powder as animal feed. **CONTENT** : this report deals with the Community subventions for the use of skimmed milk powder (SMP) and skimmed milk (SM) as animal feed, i.e. some 500 000 tonnes per annum for which EUR 386 million was spent in 1997. As a reminder, the total Community production of SMP represents 1 208 000 tonnes, of which only 35% is sold on the market without any subsidy. The rest either exported or sold in the context of disposal measures on the internal market. The Court focuses on the regulatory application on the subject and stated that this should be amended in order to determine the quality (in particular the protein content) of the SMP eligible for the aid in order to avoid aid being paid for low grade, non marketable, SMP. Moreover, the Court states that the quantities of SMP used for animal feed are continuing to drop, not only because of the crisis in the beef and veal sector, but also because of competition from other, less priced, products. The study by the Court of Auditors indicates that the level of aid paid for the use of SMP as animal feed is nearly 35% of its commercial value, the same rate of aid has applied since 1993. The Court also stipulates to this regard that the Commission has not reassessed the level of aid each year as should normally be the case. According to the Court, the creation of an effective tendering system should be provided and should allow an optimum aid level, particular in view of the rising level of stocks. Lastly, imports of SMP coming from third countries may increase. Imported SMP is fully eligible for all Community SMP aid schemes, which represents EUR 18,7 million per year although this kind of grant is limited by the WTO. Furthermore, the Court outlines irregularities in the sum of eligible quantities and sampling (SMP benefitting from aid should not contain whey powder) as well as control weaknesses as regards the particular arrangements applicable for the payment of aid for SMP incorporated into compound feedingstuffs. Consequently, the Court believes that there is scope to abrogate Regulation 986/68/EEC which governs this type of assistance, as it had already suggested in its annual report relating to 1988 financial year. ?

EAGGF, implementation of the budget. Special reports 1/1999, 2/1999, 1/2000, 8/2000, Court of Auditors

PURPOSE : to present the special report 2/1999 by the Court of Auditors on the effects of the CAP reform in the cereals sector. **CONTENT** : this special report presents an evaluation of the results of the 1992 CAP reform (the "MacSharry" reform) with regard to its objectives and identifying the weaknesses of this reform. As a reminder, the cereal culture occupies around 38 million hectares, about 25% of the Community's agricultural area, with production reaching about 200 million tonnes a year. In 1997, the operation of the common organisation of the market (COM) in this sector alone cost the Community budget more than EUR 14 billion, i.e. 34% of the EAGGF Guarantee budget. Throughout the transition period before the entry into force of this reform, the reduction of internal prices and the convergence of these with world prices made cereals in the Union relatively more competitive on the world market and their substitution products less attractive on the internal market. The exceptional situation on the market throughout the transition period (1993-1995) supported the world prices at a higher level and converged the process on the internal market with those of the world market without massive institutional prices. The Court believes that the reform achieved its objectives through the transition period. Production was kept at pre-reform level, storage has been reduced to almost zero, and more than half of the exports were achieved without export refunds. The increased level of prices in the rest of the world, or the yielding were less important, and has allowed European cereals to find openings. However, the maintenance of high prices on the Community market by comparison with the strong decrease of world prices combined with surpluses of home grown cereal, presented the

Community with a very difficult problem. According to the Court, the stability achieved during the transition period cannot be sustained. Allowing surpluses to be dealt with by means of intervention storage alone is not a sustainable solution. Consequently, the Court believes that the solutions provided for by Agenda 2000 are insufficient (reductions in intervention prices, in particular) and new measures are necessary in order to compensate the loss of farmers' earnings. According to the Court, one of the main risks of the reform resides in the fact that assistance went to larger farms : in 1995, practically 40% of land aid benefitted 3% of farmers. Therefore, serious efforts are anticipated in order to help small farmers, in providing notably the placing a ceiling on public farm support. This system could equally be risky because some of the larger farms may be tempted to split themselves up into smaller ones so that more aid may be obtained. It is the Court's opinion that, it is necessary to re-examine the present support system of farmers' earnings, which are essentially based on yield return and farm land and to envisage the possibility of defining a standard net income per farm household or working unit. Lastly, the Court believes that the farmers earnings and rural development policy in general must take into consideration the need to support employment, improve the environment and protect the country side. ?

EAGGF, implementation of the budget. Special reports 1/1999, 2/1999, 1/2000, 8/2000, Court of Auditors

PURPOSE : to present the special report 8/2000 from the Court of Auditors on Community measures for the disposal of butterfat. **CONTENT :** the present report presents the impact and the efficiency of the Community measures on the disposal of butterfat. As a reminder, these measures, introduced in 1969, aimed to limit surpluses by providing subsidies for the use of butter as only 65% of butter available is consumed at market price. Three EU disposal measures exist : a measure principally for the use of cream, butter or concentrated butter in pastry and ice cream, a measure for concentrated butter intended for direct consumption including private households and a measure for the use of butter by institutions and non-profit making organisations such as hospitals or social canteens. Some EUR 600 million is spent annually on these measures covering around 500 000 tonnes of butter each year, which is 20% of the total EU expenditure on the common market organisation (CMO) for the milk sector in 1998. The Court's audit was carried out in 1998 and in the first half of 1999 at the Commission and in six Member States (Germany, Belgium, Spain, France, the Netherlands and the United Kingdom). It centred on the management of the measures and it included an appreciation of the cost-effectiveness and related aspects of the efficiency of the measures. The observations of the Court are based on an examination of the systems involved and the testing based on the key controls as well as on the examination of a number of selected transactions. Particular attention was paid to the butter for pastry measure which accounted for 87% of the expenditure on disposal measures in 1998. The Court commented at the time on the complexity of the measures and on the need to increase the frequency of on-the-spot checks and to improve their central monitoring. The aid level (about 30% of the market price of butter) could be further reduced, if market forces were allowed to play their role fully. Low quality and imported butter are eligible for EU support, thereby reducing the impact of the measures. The Commission Regulation stipulates the adding of tracers to products for control reasons. The Commission argues that these tracers have been considered to be harmless for human consumption. However, according to an expert's opinion some of these substances foreseen as tracers give rise to a health risk. The Court points out that improvements are necessary at Member State level concerning the approval and inspection of establishments entitled to incorporate aided butterfats, the control of the adding of tracers and the controls on the European origin of butter for direct consumption. The Court believes that through time, the butter disposal measures, initially introduced on a temporary basis, developed and became permanent schemes to deal with the structural surplus despite the introduction of the milk quotas in 1984. The Commission must provide structural measures in order to encourage the demand for non-subsidised butter or limited offer. The Commission should make a comprehensive assessment of the disposal measures and revise the current tendering procedures. Lastly, the Commission should progressively reduce the aid which concentrates only on the quality non-imported butterfats and introduce provisions requiring the declaration of the presence of tracers. ?

EAGGF, implementation of the budget. Special reports 1/1999, 2/1999, 1/2000, 8/2000, Court of Auditors

The committee adopted the report by Joe McCARTIN (EPP-ED, IRL) on the Court of Auditors' special reports. As regards the skimmed milk sector, the committee pointed to the flaws of the system in force until the end of 1999 and deplored the Council's failure to take the necessary steps either in 1989 or 1993 to address a number of loopholes which had led to financial irregularities. It urged the Commission to ensure that the level of aid was closely linked to the quality of skimmed milk and skimmed milk powder. The committee was concerned about the persistent structural surplus in the milk sector and wanted to see more measures to promote demand for milk products, as was the case in other sectors (olive oil, beef, etc.). It noted that, in 1998, the cheap butter scheme for non-profit organisations was only used in 3 Member States and that EUR 511m went on subsidies for surplus butter in the same year. Improvements were therefore needed in this sector. As far as the cereals sector was concerned, the committee was critical of the Council's failure to endorse proposals aimed at building on the 1992 reform. It recommended that, if market situations improved, a subsidy-reduction mechanism should be triggered, so as to avoid over-generous aid in favourable market situations. Future proposals should also focus on channelling more compensation payments to small farmers. Lastly, as regards the special report on swine fever, the committee regretted the failure to improve the management of the Animal Movement System and also shared the Court's view that more of the burden of combating epidemics should fall on the pig farmers themselves.?

EAGGF, implementation of the budget. Special reports 1/1999, 2/1999, 1/2000, 8/2000, Court of Auditors

The report by Mr John Joseph McCARTIN (EPP/ED, IRL) has been adopted by the European Parliament. However, in relation to the Special Report on skimmed milk, it deplores the Council's inability to take the necessary steps either in 1989 or in 1993 to address a number of loopholes, including the lack of proper guarantees against the falsification of skimmed-milk powder, which had given rise to numerous irregularities detrimental to Community finances. The Commission is requested to ensure that the level of aid granted for skimmed milk and skimmed-milk powder is closely linked to the quality of the product, with particular reference to the minimum protein content. The Parliament also requests the Commission to consider the possibility of introducing a tender procedure for the fixing of the aid level for the use of skimmed-milk powder, as it does already in connection with the sales of that product from public storage under Commission Regulation

2799/1999. With regard to the Special Report on butterfat, the Parliament regrets the persistent surplus in the milk sector due, in part, to a reduction in consumption. Therefore, it asks that measures should be taken at Community and national level to promote demand for milk and various milk products. It also asks the Commission to ensure that Member States introduce improvements to the administration of the disposal measures with particular emphasis on control and monitoring mechanisms. Lastly, it asks the Commission to ensure that subsidies for butterfat are not subject to VAT throughout the Union and to indicate a timetable of the future action aimed at simplifying the VAT system. As far as the Special Report on cereals is concerned, the Parliament shares the Court of Auditors' view that the global production trend in cereals, as well as the divergent trends in Member States, make it unlikely that the reform will have any lasting effects on production levels. According to the Parliament, future proposals for the sector should : address the need to improve the position of smaller producers by differentiating support according to farm size or yield; explore the possibilities of cofinancing certain income support; tackle the present situation according to which support for the cereals sector is concentrated in the more prosperous regions of the Union and; endeavour to redress the uneven distribution of incomes. Lastly, as regards the Special report on classical swine fever, the Parliament attaches great importance to the speedy conclusion of the procedure for amending Council Directive 80/217/EEC on the control of classical swine fever. The Commission is also asked to ensure that the Animal Movement System (ANIMO) is managed and developed under the full control of the Commission. ?
