Final act

Regulation 2004/552

Single European Sky: interoperability of the European traffic management network

PURPOSE : to present a proposal for a regulation on the interoperability of the European Air Traffic management network. **CONTENT :** the objective of this proposal for a regulation is to achieve interoperability within Community territory between the different systems and constituents of the air traffic management network, and make use of the possibilities offered by new technologies. The Community has decision-making mechanisms allowing for harmonisation and standardisation at European level. To achieve this, the Commission proposes a text enshrining the principle of standardisation in the field of air traffic management, on its own initiative (subject to compliance with international commitments already given). The objective is to put in place an instrument which will be effective and comprehensive. But it must also be rapid and flexible to allow harmonised Europe-wide definition and implementation of the technical regulations necessary. The proposed regulatory framework approach foresees three different levels: - the adoption of essential requirements and specific requirements for all stakeholders engaged in the development, production and operation systems; - establishment of implementation rules to enforce these requirements. The objective of this level is to secure compliance with operational and technical developments when this is required by their cross-border nature and therefore the need for integrated operations. The implementation of rules may in particular impose on the new operators concerned a target date for the entry into force of new concepts or technological advances; - drafting of European standards and/or EUROCONTROL technical specifications representing the lower level of the regulatory process and implying the consensual agreement of stakeholders on standards of voluntary application. Procedures to elaborate the above mentioned requirements and standards must reflect their mandatory or voluntary nature. Therefore, the Commission proposes that the implementation rules are established on the basis of the work carried out by EUROCONTROL. With regard to European standards, they are established by consensus, subject to the public inquiry and approved by recognised European Standardisation Organisation, in collaboration with Eurocae, the European Organisation for Civil Aviation Equipment. These standards will have to be taken over unchanged in the national standards. At product level, manufacturers are required to make a declaration of conformity with essential requirements. The conformity to essential requirements with additional certification by the authorities. To be able to make this declaration or depart from the standards, manufacturers will have to submit a dossier to a notified body which will certify conformity of the product with the essential requirements. This approach will allow the free circulation of products within the EU and create the conditions for a genuinely competitive environment among manufacturers. It is important that the Community airspace should enjoy the benefit of the solutions which are both technically and commercially and which are best suited to airspace users and passengers. To this end, the Commission proposes that: - the financial aid procedures for the Trans-European networks programme and the fifth programme for research and development (1998-2002) should be optimised. A framework should be provided for projects of common interest through the new programme for research and technological development (2003-2006) under which aeronautical research is a priority.?

Single European Sky: interoperability of the European traffic management network

The committee adopted the report by Marieke SANDERS-TEN HOLTE (ELDR, NL) broadly approving the proposal under the codecision procedure (1st reading), subject to a number of amendments. These focused on the question of safety, calling for high levels of safety to be maintained where user charges are introduced, for reviews of the air navigation system in future to give due regard to safety levels and for safety levels to be explicitly considered where authorisations are granted to service providers. The report said that such authorisations should be granted for a minimum of five years and a maximum of ten years. The committee also wanted to introduce a procedure of referral to the Commission so as to help ensure the uniform application of the regulation. Another amendment sought to include Air Traffic Management (ATM) personnel as well as controllers in the new proposal to be drawn up by the Commission on the mobility of air traffic controllers, and called for the mutual recognition of licences. The report further stressed the need for enhanced cooperation between civil and military air traffic services. Other points raised by the committee included the need to ensure that operational data were used only for operational purposes to prevent any misuse of data, a call for Eurocontrol's expertise to be brought to bear on the charging system and the need to ensure that, in monopoly situations, charges and conditions were set by national supervisory authorities after consulting airspace users, with due regard to best practice, in order to find a balance between the various interests. ?

Single European Sky: interoperability of the European traffic management network

The European Parliament adopted a resolution based on the report by Marieke SANDERS-TEN HOLTE (ELDR/NL) and made some amendments to the Commission's proposal. (Please refer to the document dated 10/07/02.) Parliament called for the European Aviation Safety Agency to have a leading role in coordinating interoperability measures. The safety aspects of the design, building and maintenance of surveillance data, communications systems and navigation systems were emphasised.?

Single European Sky: interoperability of the European traffic management network

The Commission accepted those amendments made by the Parliament which reinforce reference to safety and the need for consultation of interested parties. It accepts the following in principle: - the principle of consultation of industry in a recital, but not the establishment of an industry advisory group; - the need for the systematic analysis of incidents. The Commission rejects certain amendments, including: - the reference to the European Aviation Safety Agency; - the involvement of system users in the definition of systems. Some users, such as controllers, should not contribute to all the phases of the development process.?

Single European Sky: interoperability of the European traffic management network

The Council accepted 8 amendments proposed by the European Parliament, these are as follows. The common position introduced more

detailed provisions concerning transitional arrangements. This aimed to safeguard investments made by Member States in the period before the entry into force of the regulation. From the point of view of the form, the common position reduces the number of articles. The provisions of chapter II and III of the Commission's proposals were merged under a single chapter. As in the case of the other specific regulations, the Council considered that the issue of consultation of stakeholders was of horizontal nature and, as such, more appropriate to be dealt with in the framework regulation. The Council made no substantial changes to the text as submitted by the Commission. However, it reshuffled the text considerably in order to make it easier to understand. The Council inserted more detailed provisions concerning transitional arrangements with a view to protecting the investments made by Member States in the period before the entry into force of the Regulation. Like in the other specific Regulations, the Council felt that the consultation of stakeholders was an issue of a horizontal nature, which should be dealt with in the framework Regulation. To be noted finally that annexes I and II to the Regulation have been revised by an ad hoc experts group, which refined the relevant texts. The Council considers that the texts of its common position on the Single European Sky package are appropriate and balanced. With respect to the amendments submitted by the European Parliament in first reading, the Council observes that the large majority of these amendments are, as to their aim and spirit, very similar to the corresponding provisions of the Council's common position. Therefore, the Council holds the opinion that the texts of its common position ensure by and large that the aim sought by these amendments is achieved. Finally, the Council would like to underline that the agreement that it has reached in respect of civil-military cooperation, which in its present form is acceptable to all relevant parties in the Member States, constitutes the fruit of much and hard work with respect to this very delicate issue.?

Single European Sky: interoperability of the European traffic management network

The Council made no substantial changes relative to the Commission's proposal. Thus the Commission can fully support the common position with regard to this Regulation.?

Single European Sky: interoperability of the European traffic management network

The committee adopted the report by Marieke SANDERS-TEN HOLTE (ELDR, NL) amending the Council's common position under the 2nd reading of the codecision procedure. It reinstated key amendments from 1st reading, as follows: - arrangements should be made to overcome the lack of controllers and air traffic management personnel (ATM personnel) through harmonised Community procedures; there should also be mutual recognition of licences; the Commission should monitor the development of recruitment programmes by the Member States and provide support where necessary; - authorisations for air navigation service providers should be granted for a minimum of 5 years and a maximum of 10 years. The committee also stipulated that cross-subsidisation of different air navigation services shall be permitted "only in exceptional cases" and in that event must be clearly identified. Lastly, it deleted the new provision introduced by the Council which would have delayed the entry into force of the provisions relating to certification and the designation of service providers.?

Single European Sky: interoperability of the European traffic management network

The European Parliament adopted a resolution drafted by Marieke SANDERS-TEN HOLTE (ELDR, NL) accepting the council's common position subject to one amendment on dates. (Please see the summary of 12/06/03).?

Single European Sky: interoperability of the European traffic management network

The European Parliament adopted at second reading one amendment to the Common Position of the Council. The Commission can accept this amendment in part. This amendment constitutes an improvement since it requires speeding up the process of conformity of all systems with the essential requirements. The amendment rejected by the Commission concerns the application of essential requirements requiring a transitional period during which implementing rules and Community specifications will have to be established.?

Single European Sky: interoperability of the European traffic management network

The European Parliament voted to approve the joint text agreed by the Conciliation Committee. (Please see the summary of 09/12/03).?

Single European Sky: interoperability of the European traffic management network

PURPOSE : to achieve interoperability within Community territory between the different systems and constituents of the air traffic management network, and make use of the possibilities offered by new technologies. **LEGISLATIVE ACT** : Regulation 552/2004/EC of the European Parliament and of the Council on the interoperability of the European Air Traffic Management network ("the interoperability Regulation"). **CONTENT** : the Council adopted, by written procedure, the package of four Regulations aimed at creating a "Single European Sky" in accordance with the joint text agreed by the Conciliation Committee, introducing common rules on the use of airspace throughout the Community in order to reduce air delays and airspace congestion. The "Single European Sky" package contains a framework Regulation and three implementing Regulations covering air navigation service provision, organisation and use of airspace and interoperability within the European air transport management network. These legislative proposals aims, in particular, at improving and reinforcing safety, and at restructuring airspace as a function of traffic flow rather than according to national boundaries. The interoperability Regulation has a double objective. It aims to achieve interoperability between the different systems, constituents and associated procedures of the European air traffic

management network, and to promote the introduction of new agreed and validated concepts of operations and technology in air traffic management. An agreement was reached on the date of the transitional arrangements for putting into service the systems and constituents of the European Air Traffic Management Network. ENTRY INTO FORCE : 01/04/2004.?

Single European Sky: interoperability of the European traffic management network

The Conciliation Committee reached agreement on the one outstanding point of issue concerning the regulation on the interoperability of the traffic management network in the Single European Sky, namely, the timetable for compliance of new and existing systems and constituents with the essential requirements. Although Parliament had wanted the process of conformity of all systems to be speeded up, in the end it agreed to accept the Council's proposal that the requirements should apply to new systems and constituents 18 months after the regulation's entry into force and to existing systems and constituents 7 years after the regulation's entry into force. ?
