Regulation 2002/254 OJ L 041 13.02.2002, p. 0001-0003 Summary
--

Conservation of fishery resources: stock of cod in the Irish Sea ICES VIIa, measures for 2002

PURPOSE : to establish measures for 2002 relating to the recovery of cod stock in the Irish Sea. CONTENT : Scientific advice provided in 1999 by the International Council for the Exploration of the Sea indicated that the quantity of mature cod then present in the Irish Sea was at an historically low level. Subsequent advice stated that this quantity has further decreased in 2000 and 2001. This gives rise to concern that the cod stock may be in such a condition that it cannot easily recover. Steps have already been taken to protect mature cod during the spawning season of 2000 and 2001 to allow them to produce as many eggs as possible. Similar conditions need to be established for the spawning season of 2002, pending consideration by Council of proposals for a multi-annual recovery programme for cod and hake stocks that is intended to replace those measures. As Council decisions on the recovery programme are unlikely before mid-2002, it is necessary to renew the current measures for a further year.?

Conservation of fishery resources: stock of cod in the Irish Sea ICES VIIa, measures for 2002

The European Parliament adopted this report. (Procedure without report).?

Conservation of fishery resources: stock of cod in the Irish Sea ICES VIIa, measures for 2002

PURPOSE : to establish measures to be applicable in 2002 for the recovery of the stocks of cod in the Irish Sea. COMMUNITY MEASURE : Council Regulation 254/2002/EC establishing measures to be applicable in 2002 for the recovery of the stocks of cod in the Irish Sea. CONTENT : the Council adopted the regulation establishing measures applicable for 2002 for the recovery of cod stocks in the Irish Sea. This regulation puts in place measures to protect adult cod during the 2002 spawning season. The most important means of achieving this objective is an area closure which should be in force before the traditional fishing season starts on 14 February. It also contains certain provisions to avoid practical difficulties encountered in certain fisheries as a result of technical measures introduced to protect cod. This regulation has been proposed following scientific advice from the International Council for the Exploration of the Sea in 1999 that indicated that the quantity of mature cod then present in the Irish Sea was at an historically low level. ENTRY INTO FORCE : 13/02/2002. The regulation shall apply from 14 February 2002.?
