Broad guidelines of the economic policies of the Member States and the Community for 2002

PURPOSE : to present the European Commission recommendation for the 2002 Broad Economic Policy Guidelines (BEPGs) of the Member States and the European Union. **CONTENT** : with the 2002 BEPG's, the EU enhances its integrated economic policy strategy. In order to achieve its ambitious economic objectives, the 2002 BEPGs urge Member States to step up the pace of economic reform. Action is recommended to concentrate on four areas: 1) safeguarding macro-economic stability : the 2002 BEPGs advocate efforts to be stepped up to reach budgetary positions close to balance or surplus as soon as possible in all Member States and at the latest by 2004. The norm for budgetary behaviour should be to let automatic stabilisers operate freely and symmetrical over the cycle, subject to the 3% of GDP deficit threshold. Cyclically adjusted budget balances should be close to balance or in surplus at all times. To accomplish or maintain a sound budgetary position, tax reforms must be properly financed and matched with reductions in public expenditures where appropriate. Moreover, continued responsible wage behaviour is needed from the Social Partners. Nominal wage increases should be set consistent with price stability, job creation and labour market conditions, thereby allowing an evolution of wages according to productivity developments and skills differentials; 2) raising labour force participation and employment as well as addressing persistent unemployment : it is imperative to prevent the forecasted cyclical increase in unemployment this year from becoming structural in nature. The 2002 BEPGs recommend measures to lower the cost of labour and to adapt tax and benefit systems (including conditionality, eligibility and duration) to make work pay. Further recommendations ask for the removal of obstacles to regional and occupational labour mobility, for improved real wage flexibility, and for increased effectiveness of active labour market policies. In order to strengthen incentives for people to take up work and to enable them to participate in the labour market, the 2002 BEPGs address a number of concrete guidelines to Member States, specifically phasing out early retirement schemes, increasing care facilities for children and other dependants, promoting flexible work organisation, including part-time formula's for education and training, and improving information about job opportunities; 3) strengthening conditions for high productivity growth : despite encouraging progress thus far, large segments of European product markets are still insufficiently integrated to make the Union an attractive location for investment. To this end, the 2002 BEPGs advocate reforms inter alia the further integration of energy and communication networks across Europe. They also call for greater incentives for private sector R&D spending, knowledge transfer between universities and

businesses and access to ICT. Equally important is a business-friendly regulatory environment, more efficient public tendering, and investment in education and training to enhance the skills and adaptability of the workforce; 4) promoting sustainable development in the interest of current and future generations : The 2002 BEPGs ask Member States to make more use of economic instruments like taxation and insurance/liability schemes. They are a way to implement the polluter-pays principle more consistently and with greater cost-effectiveness because they allow prices to reflect the costs of environmental damage and they encourage technological innovation. In order to fulfil the requirements of the Kyoto protocol in a cost-effective way, Member States should inter alia prepare for the introduction of emissions trading at the EU level. In order to prepare for the challenges posed by ageing societies, the 2002 BEPGs recommend Member States to pursue a comprehensive strategy. This includes efforts to raise their employment rates as well as reform pension and health care systems with a view of placing them on a sound financial footing. Warranted are also measures that aim at increasing the effective retirement age (for instance by restricting access to early retirement programmes), making the pension systems cope better with demographic risks and increases in life expectancy, and promoting greater reliance on funding as well as actuarial fairness.?

Broad guidelines of the economic policies of the Member States and the Community for 2002

Following a presentation by the Commission, the Council held an exchange of views on the Commission Recommendation on the Broad Economic Policy Guidelines for 2002. The Council in particular focussed on general policy recommendations and priority areas to be examined by the Economic and Financial Committee (EFC) and the Economic Policy Committee (EPC) in their further work on the guidelines. The Council broadly supported the emphasis placed by the Commission on the four key challenges for the next year: - safeguarding and further strengthening the macroeconomic framework; - promoting more and better jobs, raising labour force participation and addressing persistent unemployment; - strengthening conditions for high productivity growth; - promoting sustainable development in the interest of current and future generations. The ECOFIN Council on 4 June 2002 will adopt the report on the draft BEPGs which will be submitted to the Seville European Council.?

Broad guidelines of the economic policies of the Member States and the Community for 2002

The European Parliament has adopted by 386 votes to 47, with 21 abstentions, the report by Mr Bruno Trentin (PSE, I) proposing amendments to the Commission's recommendation for the Broad Guidelines of the Economic Policies of the Member States and the Community for the year 2002. While welcoming the Commission recommendation in general, Parliament considers that the coordinated strategy framework for the economic and social policies of the eurozone countries has to be strengthened so that the EU is capable of effectively resisting the trend towards recession, particularly by pursuing an active and coherent investment policy geared to investment in human resources. It calls on the Member States to practise environmental mainstreaming in their economic, employment and social policies and to speed up the modernisation of the European social model as a productive factor for growth and skilled employment. Parliament agrees that sound public finances are essential but that they alone are not sufficient to guarantee sustainable growth. A sound balance has to be struck between reducing public debt, lowering taxation and continuing the funding of public investment in key areas such as research and innovation, training and lifelong learning and the encouragement of innovative forms of work organisation that can enhance the quality of labour and output. Parliament also emphasises the need to permit selective labour mobility as a means of overcoming bottlenecks in European labour markets, to balance mobility by means of regional policies to ensure that it does not drain the human resources of economically weaker regions and to respect the right of each jobseeker to freely choose his or her place of employment. Parliament also asks the Council to take the following measures: - pursue an active policy of creating incentives for the reintegration into the labour market of those who are currently receiving unemployment benefits; - promote preventive consultation of employees in restructuring processes; - guarantee the proper functioning of high-quality services of general economic interest; - facilitate business start-ups by prospective young entrepreneurs; - ensure that public and private investment policies are coordinated so that each investment decision can be made more efficient and generate its own dynamism; - adopt all kinds of measures, including training measures for the applicant countries, in order to avoid the collapse of the social model in an enlarged Europe. ?

Broad guidelines of the economic policies of the Member States and the Community for 2002

PURPOSE : to present the broad guidelines of the economic policies of the Member States and the Community for 2002. COMMUNITY MEASURE : Council Recommendation 2002/549/EC on the broad guidelines of the economic policies of the Member States and the Community. CONTENT : the Council adopted its recommendation on the BEPG for the year 2002 (please refer to the previous document for information on the contents of this recommendation).?

Broad guidelines of the economic policies of the Member States and the Community for 2002

The Council approved the recommendation on the Broad Economic Policy Guidelines (BEPGs) at a special session in Seville following the Seville European Council. The 2002 set of the Broad Economic Policy Guidelines (BEPGs) of the Member States and the Community re-confirms the existing, well-defined economic policy strategy. This strategy is oriented towards the pursuit of growth- and stability- oriented macroeconomic policies, capable of adequately responding to changing economic circumstances in the short run, and at the same time of improving the capacity for long-term sustainable, job-creating and non-inflationary growth. The new set highlights four key challenges: - safeguarding and further strengthening the macroeconomic framework, - enhancing labour force participation and employment, - strengthening conditions for high productivity growth, and - promoting sustainable development. Member States are committed to complete the transition to medium-term budgetary positions close to balance or in surplus by 2004 at the latest. Pending the achievement of such positions, they will avoid pro-cyclical budgetary policies. Member States have agreed to make further headway in strengthening public finances with a view to secure their long-term sustainability, notably in view of the additional burden posed by ageing populations. Continued responsible wage behaviour by the Social Partners, contributing to price stability and further job creation, is equally important in preserving growth- and stability-oriented macroeconomic conditions. The functioning of labour markets has visibly improved. However, the pace of reform needs to be further accelerated to achieve the employment objectives of Lisbon. Forceful policy action will be aimed at reducing unemployment, and at

increasing labour force participation. Incentives for people to take up or continue to work will be strengthened. This involves adjustments to tax and benefit systems (including conditionality, eligibility and duration) to make work pay; reductions in incentives for early retirement; and measures to reduce obstacles to geographical and occupational mobility. A fully integrated and competitive Internal Market will boost productivity growth. To this aim, continued structural reforms in product and capital markets are essential, particularly in services, in network industries, and in newly liberalised markets. Further steps will be undertaken in creating a business-friendly regulatory environment supportive of innovation. Further, investment will be made in education and training to enhance the skills and adaptability of the workforce, and to encourage entrepreneurship and accelerate the transition to a knowledge-based economy. To encourage investment in the EU, the cost of capital must be reduced through improved efficiency and accelerated integration of the EU financial markets. The Financial Services Action Plan will be completed by 2005 and eight important legal measures are about to be adopted this year. To promote sustainable development, economic policies aim at ensuring that the external effects of economic activities on the environment are fully priced in, notably through a full application of the polluter-pays principle. Economic policies aim also at adequately preparing for the challenges posed by ageing societies notably where labour market participation and its financial consequences are concerned. Action will focus on supporting a long-term sustainable working life so as to support higher employment rates and on ensuring the long-term sustainability of public finances and pension systems?
