PURPOSE: to adopt new rules for more sound, transparent and efficient EU financial markets (recast of the Markets in Financial Instruments Directive (MiFID)).

PROPOSED ACT: Directive of the European Parliament and of the Council.

BACKGROUND: the Markets in Financial Instruments Directive (MiFID) (Directive 2004/39/EC), in force since November 2007, is a core pillar in EU financial market integration. It establishes a regulatory framework for the provision of investment services in financial instruments (such as brokerage, advice, dealing, portfolio management, underwriting etc.) by banks and investment firms and for the operation of regulated markets by market operators. It also establishes the powers and duties of national competent authorities in relation to these activities.

The result after 3.5 years in force is more competition between venues in the trading of financial instruments, and more choice for investors in terms of service providers and available financial instruments, progress which has been compounded by technological advances. Overall, transaction costs have decreased and integration has increased.

However, some problems have surfaced:

- the benefits from this increased competition have not flowed equally to all market participants and have not always been passed on to the end investors, retail or wholesale;
- the market fragmentation implied by competition has also made the trading environment more complex;
- market and technological developments have outpaced various provisions in MiFID;
- the financial crisis has exposed weaknesses in the regulation of instruments other than shares, traded mostly between professional investors.

In line with the recommendations from the de Larosière group and the conclusions of the ECOFIN Council of June 2009, the revision of MiFID therefore constitutes an integral part of the reforms aimed at establishing a safer, sounder, more transparent and more responsible financial system. It is also an essential vehicle for delivering on the G20 commitment to tackle less regulated and more opaque parts of the financial system, and improve the organisation, transparency and oversight of various market segments, especially in those instruments traded mostly over the counter (OTC), complementing the [legislative proposal](#) on OTC derivatives, central counterparties and trade repositories.

The review of MiFID will contribute to establishing a single rulebook for EU financial markets, help further develop a level playing field for Member States and market participants, improve supervision and enforcement, reduce costs for market participants, and improve conditions of access and enhance the global competitiveness of the EU financial industry.

The proposal amending MiFID is divided in two:

- this proposed Directive on markets in financial instruments, repealing Directive 2004/39/EC of the European Parliament and of the Council;
- [the draft Regulation](#) on markets in financial instruments and amending Regulation [EMIR] on OTC derivatives, central counterparties and trade repositories.

IMPACT ASSESSMENT: policy options were assessed against different criteria: transparency of market operations for regulators and market participants, investor protection and confidence, level playing field for market venues and trading systems in the EU, and cost-effectiveness. Overall, the review of MiFID is estimated to generate one-off compliance costs of between EUR 512 and EUR 732 million and ongoing costs of between EUR 312 and EUR 586 million. This represents one-off and ongoing cost impacts of respectively 0.10% to 0.15% and 0.06% to 0.12% of total operating spending of the EU banking sector. This is far less than the costs imposed at the time of the introduction of MiFID.

LEGAL BASIS: Article 53(1) of the Treaty on the Functioning of the European Union (TFEU).

CONTENT: the proposed Directive amends specific requirements regarding the provision of investment services, the scope of exemptions from the current Directive, organisational and conduct of business requirements for investment firms, organisational requirements for trading venues, the authorisation and ongoing obligations applicable to providers of data services, powers available to competent authorities, sanctions, and rules applicable to third-country firms operating via a branch.

A central aim of the proposal is to ensure that all organised trading is conducted on regulated trading venues: regulated markets, multilateral trading facilities (MTFs) and organised trading facilities (OTFs). Identical pre and post trade transparency requirements will apply to all of these venues. Likewise, the requirements in terms of organisational aspects and market surveillance applicable to all three venues are nearly identical. This will ensure a level playing field where there are functionally similar activities bringing together third-party trading interests. Importantly however, the transparency requirements will be calibrated for different types of instruments, notably equity, bonds, and derivatives, and for different types of trading, notably order book and quote driven systems.

The main elements of the proposed Directive are as follows:

- Extension of MiFID rules to like products and services: the proposals extend MiFID requirements, and particularly conduct of business and conflicts of interest rules, to the advised and non-advised sale of structured deposits by credit institutions, specify that MiFID also applies to investment firms and credit institutions selling their own securities when not providing any advice, and require Member States to apply authorisation and conduct of business requirements analogous to MiFID in national legislation applicable to locally-based entities.
- Revision of exemptions from MiFID: the proposal therefore limits the exemptions more clearly to activities which are less central to MiFID and primarily proprietary or commercial in nature, or which do not constitute high-frequency trading.
- Upgrades to the market structure framework: the proposal creates a new category for organised trading facilities which do not correspond to any of the existing categories, underpinned by strong organisational requirements and identical transparency rules, and upgrade key requirements across all venues to account for the greater competition and cross-border trading generated together by technological advances and MiFID.
- Improvements to corporate governance: the proposals seek to ensure members of the management body possess the sufficient knowledge and skills and comprehend the risks associated with the activity of the firm in order to ensure the firm is managed in a sound and prudent way in the interests of investors and market integrity.
- Enhanced organisational requirements to safeguard the efficient functioning and integrity of markets: the proposals aim to bring all entities engaged in high-frequency trading into MiFID, require appropriate organisational safeguards from these firms and those offering market access to other high-frequency traders, and require venues to adopt appropriate risk controls to mitigate disorderly

trading and ensure the resiliency of their platforms.

- Enhancement of the investor protection framework: the proposal strengthens the regulatory framework for the provision of investment advice and portfolio management and the possibility for investment firms to accept incentive by third parties (inducements) as well as it clarifies the conditions and arrangements under which investors are able to transact freely in the market in certain non-complex instruments with minimal duties or protections afforded on behalf of their investment firm. Furthermore, it reinforces the requirements concerning the handling of funds or instruments belonging to clients by investment firms and their agents and classifies as an investment service the safekeeping of financial instruments on behalf of clients. The proposal helps improving the information to clients in relation to the services provided to them and to the execution of their orders.
- Heightened protection in the provision of investment services to non-retail clients: the overarching high level principle to act honestly, fairly and professionally and the obligation to be fair, clear and not misleading should apply irrespective of client categorization. Finally, it is proposed that eligible counterparties benefit from better information and documentation for services provided.
- New requirements for trading venues: the proposal therefore introduces a requirement for trading venues to publish annual data on execution quality. Second, commodity derivative contracts traded on trading venues frequently attract the broadest participation by users and investors and can often serve as a benchmark price discovery venues feeding into, for example, retail energy and food prices. It is therefore proposed that all trading venues on which commodity derivative contracts are traded adopt appropriate limits or alternative arrangements to ensure the orderly functioning of the market.
- An improved regime for SME markets: it is proposed to create a new subcategory of markets known as SME growth markets. An operator of such a market (which are usually operated as MTFs) could elect to apply to have the MTF also registered as an SME growth market if it meets certain conditions.
- Third country regime: the proposal creates a harmonised framework for granting access to EU markets for firms and market operators based in third countries in order to overcome the current fragmentation into national third country regimes and to ensure a level playing field for all financial services actors in the EU territory. It introduces a regime based on a preliminary equivalence assessment of third country jurisdictions by the Commission. Third country firms from third countries for which an equivalence decision has been adopted would be able to request to provide services in the Union. Services provided to eligible counterparties would not require the establishment of a branch; third country firms could provide them subject to ESMA registration. They would be supervised in their country. Appropriate cooperation agreement between the supervisors in third countries and national competent authorities and ESMA would be necessary.
- Increased and more efficient data consolidation: the proposals improve the quality and consistency of data by requiring that all firms publish their trade reports through Approved Publication Arrangement (APA). The provisions set procedures for competent authority to authorise the APAs and set organisational requirements for the APAs.
- Heightened powers over derivative-positions for competent authorities: the regulators would be bestowed with explicit powers to demand information from any person regarding the positions held in the derivative instruments concerned as well as in emission allowances. The supervisory authorities would be able to intervene at any stage during the life of a derivative contract and take action that a position be reduced. This heightened position management would be complemented by the possibility to limit positions in an ex-ante, non-discriminatory fashion. All actions should be notified to [ESMA](#).
- Effective sanctions: Member States should provide that appropriate administrative sanctions and measures can be applied to breaches of MiFID. To this end, the Directive will require them to comply with the following minimum rules. The maximum level of administrative pecuniary sanctions laid down in national legislation should exceed the benefits derived from the breach if they can be determined and, in any case, should not be lower than the level provided for by the Directive. Criminal sanctions are not covered by this proposal.
- Emission allowances: unlike trading in derivatives, spot secondary markets in EU emission allowances (EUAs) are largely unregulated. A range of fraudulent practices have occurred in spot markets which could undermine trust in the emissions trading scheme (ETS), set up by the EU ETS Directive. In parallel to measures within the EU ETS Directive to reinforce the system of EUA registries and conditions for opening an account to trade EUAs, the proposal would render the entire EUA market subject to financial market regulation. Both spot and derivative markets would be under a single supervisor. MiFID and the Directive 2003/6/EC on market abuse would apply, thereby comprehensively upgrading the security of the market without interfering with its purpose, which remains emissions reduction. Moreover, this will ensure coherence with the rules already applying to EUA derivatives and lead to greater security as banks and investment firms, entities obliged to monitor trading activity for fraud, abuse or money laundering, would assume a bigger role in vetting prospective spot traders.

BUDGETARY IMPLICATIONS: the specific budget implications of the proposal relate to task allocated to ESMA. Total appropriations are estimated at EUR 1 744 million from 2013 to 2015.

DELEGATED ACTS: the proposal contains provisions empowering the Commission to adopt delegated acts in accordance with Article 290 TFEU.

2011/0298(COD) - 05/10/2012 Committee report tabled for plenary, 1st reading/single reading

The Committee on Economic and Monetary Affairs adopted the report by Markus FERBER (EPP, DE) on the proposal for a directive of the European Parliament and of the Council on markets in financial instruments repealing Directive 2004/39/EC of the European Parliament and of the Council (recast).

The parliamentary committee recommends that the European Parliament's position adopted at first reading under the ordinary legislative procedure should amend the Commission's proposal as follows:

Strengthening the regulatory framework: the text underlines that the evolution of financial markets has exposed the need to strengthen the framework for the regulation of markets in financial instruments, including where trading in such markets takes place over the counter. It is necessary in particular to ensure that new organised trading systems (which have emerged alongside regulated markets) do not benefit from regulatory loopholes. All trading venues, namely regulated markets, multilateral trading facilities (MTFs), and organised trading facilities (OTFs), should lay down transparent rules.

Investments under insurance contracts: investments are often sold to clients in the form of insurance contracts as an alternative to or substitute for financial instruments regulated under this Directive. To deliver consistent protection for retail clients, it is important that investments under insurance contracts are subject to the same conduct of business standards, in particular those relating to managing

conflicts of interest, restrictions on inducements, and rules on ensuring the suitability of advice or appropriateness of non-advised sales.

The investor protection and conflicts of interest requirements in this Directive should therefore be applied equally to those investments packaged under insurance contracts and coordination should be ensured between this Directive and other relevant law including Directive 2002/92/EC of the European Parliament and of the Council of 9 December 2002 on insurance mediation.

Conflicts of interest: to prevent conflicts of interest an executive member of the management body of investment firms should not also be an executive member of the management body of a trading venue but could be a non-executive member of such a management body, for example in order to provide user participation in decision-making.

Where practiced, employee representation in the management body should also be seen as a positive way of enhancing diversity, by adding a key perspective and genuine knowledge of the internal workings of the institution. Furthermore mechanisms are needed to ensure that members of management bodies can be held accountable in case of severe mis-management.

Algorithmic trading and high-frequency trading: members strongly support the Commission proposals on regulatory scrutiny of algorithmic trading where a trading system analyses data or signals from the market at high speed, typically in milliseconds or microseconds, and then sends or updates large numbers of orders within a very short time period in response to that analysis. Both firms and trading venues should ensure robust measures are in place to ensure that high-frequency and automated trading does not create a disorderly market and cannot be used for abusive purposes.

All orders should be subject to appropriate risk controls at source. In addition, it is proposed to end the practice of sponsored and naked access to avoid the risk that firms with insufficient controls in place create disorderly market conditions and to ensure that market participants can be identified and held accountable for any disorderly conditions for which they are responsible. It is also necessary to be able to clearly identify order flows coming from high-frequency trading.

ESMA should also continue to monitor developments in technology and in methods used to access trading venues and should continue to prepare guidelines to ensure that the requirements of this Directive can continue to be effectively applied in the light of new practices.

Fee structures of trading venues: these should be transparent, non-discriminatory and fair and should not be structured in such a way as to promote disorderly market conditions. Trading venue fee structures should incentivise a lower ratio of system messages to executed trades with higher fees applying to practices such as the cancellation of high volumes or proportions of orders which could create such disorderly conditions.

Ensuring appropriate investor protection: Member States should ensure that:

- investment products or structured deposits for sale to professional or retail clients designed by investment firms should meet the needs and characteristics of an identified target market within the relevant category of clients;
- the investment firm should take reasonable steps to ensure that the investment product is marketed and distributed to clients within the target group.

Producers should also periodically review the performance of their products, to assess whether the products have performed in accordance with their design and to establish whether their target market for the product remains correct.

Investment firms providing investment advice should:

- clarify the basis of the advice they provide, in particular the range of products they consider in providing personal recommendations to clients, the cost of the advice or, where the cost of fees and inducements cannot be ascertained prior to the provision of the advice, the manner in which the cost will be calculated;
- indicate whether the investment advice is provided in conjunction with the acceptance or receipt of third-party inducements and whether the investment firms provide the clients with the periodic assessment of the suitability of the financial instruments recommended to them.

Consumer protection: the objective is to ensure investment firms do not remunerate or assess the performance of their own staff in a way that conflicts with the firm's duty to act in the best interests of their clients.

Remuneration of staff selling or advising on investments should therefore not be solely dependent on sales targets or the profit to the firm from a specific financial instrument as this would create incentives to deliver information which is not fair, clear and not misleading and to make recommendations which are not in the best interests of clients.

Given the complexity of investment products and the continuous innovation in their design, it is also important to ensure that staff who advise on or sell investment products to retail clients possess an appropriate level of knowledge and competence in relation to the products offered. Investment firms need to allow their staff sufficient time and resources to achieve this knowledge and competence and to apply it in providing services to clients.

Third countries: it is necessary to introduce a common regulatory framework at European Union level for third-country firms, including both investment firms and market operators. In order to provide a basis for third-country firms to benefit from a passport enabling them to provide investment services and carry out investment activities throughout the EU, the regime should i) harmonise the existing fragmented framework, ii) ensure certainty and uniform treatment of third-country firms accessing the European Union, iii) ensure that an effective equivalence assessment is carried out by the Commission, prioritising the assessment of the EU's largest trading partners and areas within the scope of the G20 programme, in relation to the regulatory and supervisory framework of third countries and iv) should provide for a comparable level of protections to investors in the EU receiving services provided by third-country firms.

2011/0298(COD) - 26/10/2012 Text adopted by Parliament, partial vote at 1st reading/single reading

The European Parliament adopted by 495 votes to 15, with 19 abstentions, amendments to the proposal for a Directive of the European Parliament and of the Council on markets in financial instruments repealing Directive 2004/39/EC of the European Parliament and of the

Council (recast).

The matter was referred back to the committee responsible for reconsideration and the vote was postponed until a subsequent plenary session.

The main amendments adopted by Parliament are the following:

Strengthening the regulatory framework: the text underlines that the evolution of financial markets has exposed the need to strengthen the framework for the regulation of markets in financial instruments, including where trading in such markets takes place over the counter, in order to increase transparency, better protect investors, reinforce confidence and address unregulated areas. Members want to ensure that new organised trading systems (which have emerged alongside regulated markets) do not benefit from regulatory loopholes.

All trading venues, namely regulated markets, multilateral trading facilities (MTFs), and organised trading facilities (OTFs), should lay down transparent rules. In this context, trading venues should be able to allow users to specify the type of order flow that their orders interact with prior to their orders entering the system provided this is done in an open and transparent manner and does not involve discrimination by the platform operator.

Investments under insurance contracts: investments are often sold to clients in the form of insurance contracts as an alternative to or substitute for financial instruments regulated under this Directive. To deliver consistent protection for retail clients, it is important that investments under insurance contracts are subject to the same conduct of business standards, in particular those relating to managing conflicts of interest, restrictions on inducements, and rules on ensuring the suitability of advice or appropriateness of non-advised sales.

The investor protection and conflicts of interest requirements in this Directive should therefore be applied equally to those investments packaged under insurance contracts and coordination should be ensured between this Directive and other relevant law including Directive 2002/92/EC of the European Parliament and of the Council of 9 December 2002 on insurance mediation.

Corporate governance: to prevent conflicts of interest an executive member of the management body of investment firms should not also be an executive member of the management body of a trading venue but could be a non-executive member of such a management body, for example in order to provide user participation in decision-making.

Where practiced, employee representation in the management body should also be seen as a positive way of enhancing diversity, by adding a key perspective and genuine knowledge of the internal workings of the institution. Furthermore mechanisms are needed to ensure that members of management bodies can be held accountable in case of severe mismanagement.

Algorithmic trading and high-frequency trading: Parliament strongly supports the Commission proposals on regulatory scrutiny of algorithmic trading where a trading system analyses data or signals from the market at high speed, typically in milliseconds or microseconds, and then sends or updates large numbers of orders within a very short time period in response to that analysis. Both firms and trading venues should ensure robust measures are in place to ensure that high-frequency and automated trading does not create a disorderly market and cannot be used for abusive purposes.

All orders should be subject to appropriate risk controls at source. In addition, it is proposed to end the practice of sponsored and naked access to avoid the risk that firms with insufficient controls in place create disorderly market conditions and to ensure that market participants can be identified and held accountable for any disorderly conditions for which they are responsible. It is also necessary to be able to clearly identify order flows coming from high-frequency trading.

ESMA should also continue to monitor developments in technology and in methods used to access trading venues and should continue to prepare guidelines to ensure that the requirements of this Directive can continue to be effectively applied in the light of new practices.

Fee structures of trading venues: these should be transparent, non-discriminatory and fair and should not be structured in such a way as to promote disorderly market conditions. Trading venue fee structures should incentivise a lower ratio of system messages to executed trades with higher fees applying to practices such as the cancellation of high volumes or proportions of orders which could create such disorderly conditions.

Ensuring appropriate investor protection: Member States should ensure that:

- investment products or structured deposits for sale to professional or retail clients designed by investment firms should meet the needs and characteristics of an identified target market within the relevant category of clients;
- the investment firm should take reasonable steps to ensure that the investment product is marketed and distributed to clients within the target group.

Producers should also periodically review the performance of their products, to assess whether the products have performed in accordance with their design and to establish whether their target market for the product remains correct.

Investment firms providing investment advice should:

- clarify the basis of the advice they provide, in particular the range of products they consider in providing personal recommendations to clients, the cost of the advice or, where the cost of fees and inducements cannot be ascertained prior to the provision of the advice, the manner in which the cost will be calculated;
- indicate whether the investment advice is provided in conjunction with the acceptance or receipt of third-party inducements and whether the investment firms provide the clients with the periodic assessment of the suitability of the financial instruments recommended to them.

When providing discretionary portfolio management, the investment firm should, prior to the agreement, inform the client about the expected scale of inducements, and periodic reports should disclose all inducements paid or received.

Consumer protection: the objective is to ensure investment firms do not remunerate or assess the performance of their own staff in a way that conflicts with the firm's duty to act in the best interests of their clients.

Remuneration of staff selling or advising on investments should therefore not be solely dependent on sales targets or the profit to the firm from a specific financial instrument as this would create incentives to deliver information which is not fair, clear and not misleading and to make recommendations which are not in the best interests of clients.

Given the complexity of investment products and the continuous innovation in their design, it is also important to ensure that staff who advise on or sell investment products to retail clients possess an appropriate level of knowledge and competence in relation to the products offered.

Third countries: Members stress the need to introduce a common regulatory framework at European Union level for third-country firms, including both investment firms and market operators.

In order to provide a basis for third-country firms to benefit from a passport enabling them to provide investment services and carry out investment activities throughout the EU, this regime should, among other things, ensure that an effective equivalence assessment is carried out by the Commission in relation to the regulatory and supervisory framework of third countries, prioritising the assessment of the EU's largest trading partners and areas within the scope of the G-20 programme.

Derivative contract in relation to a commodity: Parliament recommends that explicit powers should be granted to trading venues and to competent authorities to limit the ability of any person or class of persons to enter into or hold a derivative contract in relation to a commodity, based on technical standards determined by ESMA, and to otherwise manage positions in such a way as to promote integrity of the market for the derivative and the underlying commodity without unduly constraining liquidity. Such limits should not apply to positions which objectively reduce risks directly relating to commercial activities in relation to the commodity.

Development of a Union framework governing securities: with this aim, the Commission should put forward a proposal for a regulation on securities law further specifying the definition of safekeeping and administration of financial instruments and should also, in conjunction with ESMA, the European Supervisory Authority (European Banking Authority) and the European Systemic Risk Board promote work on standardisation of identifiers and messaging so as to enable near-real time transaction analysis and the identification of complex product structures, such as those containing derivatives or repos.

2011/0298(COD) - 15/04/2014 Text adopted by Parliament, 1st reading/single reading

The European Parliament adopted by 574 votes to 23 with 34 abstentions, a legislative resolution on the proposal for a directive of the European Parliament and of the Council on markets in financial instruments repealing Directive 2004/39/EC of the European Parliament and of the Council (recast)

The report had been sent back to committee during the plenary session of 26 October 2012.

Parliament adopted its position at first reading under the ordinary legislative procedure. The amendments adopted in plenary were the result of a compromise between Parliament and Council. They amend the Commissions proposal as follows:

Strengthening the regulatory framework: the text underlines that the financial crisis has exposed the need to strengthen the framework for the regulation of markets in financial instruments, including where trading in such markets takes place over-the-counter (OTC), in order to increase transparency, better protect investors, reinforce confidence, address unregulated areas, and ensure that supervisors are granted adequate powers to fulfil their tasks.

Members want to ensure that new organised trading systems (which have emerged alongside regulated markets) do not benefit from regulatory loopholes.

Market structure and transparency: Parliament and Council agreed that all trading venues, namely regulated markets, multilateral trading facilities (MTFs), and OTFs, should lay down transparent and non-discriminatory rules governing access to the facility. A central counterparty (CCP) is not covered by the term Organised Trading Facility as defined in the Directive.

Governance: to ensure sound and prudent management of the firms, the management body of an investment firm, regulated markets and data reporting services providers should at all times commit sufficient time and possess adequate collective knowledge, skills and experience to be able to understand the firm's activities including the main risks. Diversity should be one of the criteria for the composition of management bodies.

Firms have a duty to take effective steps to identify and prevent or manage conflicts of interest and mitigate the potential impact of those risks as far as possible.

Algorithmic trading and high-frequency trading: Parliament wanted to regulate algorithmic trading where a trading system analyses data or signals from the market at high speed, typically in milliseconds or microseconds, and then sends or updates large numbers of orders within a very short time period in response to that analysis. Both firms and trading venues should ensure robust measures are in place to ensure that high-frequency and automated trading does not create a disorderly market and cannot be used for abusive purposes.

Trading venues should ensure their trading systems are resilient and properly tested to deal with increased order flows or market stresses and that circuit breakers are in place on trading venues to temporarily halt trading or constrain it if there are sudden unexpected price movements.

Members or participants must carry out appropriate testing of algorithms and all order generated by algorithmic trading should be flagged in order to permit the competent authorities to react efficiently and effectively against algorithmic trading strategies that behave in an abusive manner or pose risks to the orderly functioning of the market.

The Directive would ban the provision of direct electronic access to markets by investment firms for their clients where such access was not subject to proper systems and controls.

In order to ensure that market integrity was maintained in the light of technological developments in financial markets, ESMA should regularly seek input from national experts on developments relating to trading technology.

Fee structures of trading venues: these should be transparent, non-discriminatory and fair and should not be structured in such a way as to promote disorderly market conditions. Member States should allow for trading venues to adjust their fees for cancelled orders according to the length of time for which the order was maintained and to calibrate the fees to each financial instrument to which they applied.

Ensuring appropriate investor protection: Member States should ensure that investment firms acted in accordance with the best interests of their clients and were able to comply with their obligations under this Directive. They should accordingly understand the features of the financial instruments offered or recommended and establish and review effective policies and arrangements to identify the category of clients

to whom products and services were to be provided.

Accordingly, investment firms which manufacture financial instruments must: (i) ensure that those products are manufactured to meet the needs of an identified target market of end clients within the relevant category of clients, (ii) take reasonable steps to ensure that the financial instruments were distributed to the identified target market and (iii) periodically review the identification of the target market of and the performance of the products they offered.

When advice was provided on an independent basis a sufficient range of different product providers products should be assessed prior to making a personal recommendation.

To further protect consumers, the new rules should ensure that investment firms did not remunerate or assess the performance of their own staff in a way that conflicts with the firm's duty to act in the best interests of their clients, for example through remuneration, sales targets or otherwise which provided an incentive for recommending or selling a particular financial instrument when another product may better meet the clients needs.

Staff who advised on or sell investment products to retail clients must possess an appropriate level of knowledge and competence in relation to the products offered.

The requirements of the Directive regarding investor protection also applied to investment products in the form of insurance contracts which were often sold to clients as an alternative to or substitute for financial instruments regulated under the Directive.

Derivative contract in relation to a commodity: in order to prevent market abuse, competent authorities must be able to establish limits, on the basis of a methodology determined by ESMA, on the positions any person can hold in a derivative contract in relation to a commodity at all times, including cornering the market, and to support orderly pricing and settlement conditions including the prevention of market distorting positions.

All venues which offer trading in commodity derivatives should have in place appropriate position management controls, providing the necessary powers at least to monitor and access information about commodity derivative positions, to require the reduction or termination of such positions and to require that liquidity is provided back on the market to mitigate the effects of a large or dominant position.

Firms from third countries: the amended text provided that a Member State may require that a third-country firm intending to provide investment services or perform investment activities to retail clients or to professional clients establish a branch in that Member State. The branch should acquire a prior authorisation by the competent authorities of that Member State in accordance with certain conditions.

The third-country firm requesting authorisation should, inter alia, pay due regard to any FATF recommendations in the context of anti-money laundering and countering the financing of terrorism.

2011/0298(COD) - 15/05/2014 Final act

PURPOSE: to update the current rules on markets in financial instruments with a view to creating an integrated financial market where the investors enjoy enough protection and the efficiency and integrity of the market are preserved (MiFID II).

LEGISLATIVE ACT: Directive 2014/65/EU of the European Parliament and of the Council on markets in financial instruments and amending Directive 2002/92/EC and Directive 2011/61/EU.

CONTENT: the financial crisis of 2008 has exposed weaknesses in the rules relating to instruments other than shares, which are mainly traded among professional investors.

The new Directive amends and replaces Directive 2004/39/EC of the European Parliament and Council on markets in financial instruments (MiFID).

With the [new Regulation \(MiFIR\)](#), it aims to overcome problems that emerged during the implementation of MiFID which, since 2007, has prevented Member States from requiring that negotiations take place on some exchanges.

The Directive strengthens the framework for the regulation of markets in financial instruments, including where trading in such markets takes place over-the-counter (OTC), in order to increase transparency, better protect investors, reinforce confidence, address unregulated areas, and ensure that supervisors are granted adequate powers to fulfil their tasks. It contains the provisions governing the authorisation of the business, the acquisition of qualifying holding, the exercise of the freedom of establishment and of the freedom to provide services, the operating conditions for investment firms to ensure investor protection, the powers of supervisory authorities of home and host Member States and the regime for imposing sanctions.

The main elements of the new Directive are the following:

Enhancing the regulatory framework: the Directive aims to move the negotiation organised financial instruments towards multilateral and well-regulated trading platforms. Strict transparency rules prohibit anonymous trading of shares and other equity instruments, which is an obstacle to a fair and efficient price formation. As a result, all trading platforms, that is, regulated markets, the systems of multilateral trading (multilateral trading facilities - MTF) as well as the new systems of organised trading facility (OTF) should apply transparent and non-discriminatory access rules.

Corporate governance: the Directive provides that Member States shall ensure that the management body of an investment firm defines, oversees and is accountable for the implementation of the governance arrangements that ensure effective and prudent management of the investment firm including the segregation of duties in the investment firm and the prevention of conflicts of interest, and in a manner that promotes the integrity of the market and the interest of clients.

Protection of investors: taking account of the increasing complexity of services and instruments, the Directive introduced a certain degree of harmonisation to offer investors a high level of protection across the Union. It also requires that investment firms should act in accordance with the best interests of their clients. Investment firms should accordingly understand the features of the financial instruments offered or recommended.

The investment firms which manufacture financial instruments should ensure that those products are manufactured to meet the needs of an

identified target market of end clients within the relevant category of clients (retail customers, professionals and counterparties).

These companies are also required to inform customers about the fact that the advice is offered on an independent basis and the risks associated with the recommended products and investment strategies. When advice is provided on an independent basis a sufficient range of different product providers products should be assessed prior to making a personal recommendation.

To further protect consumers, it is also appropriate to ensure that investment firms do not remunerate or assess the performance of their own staff in a way that conflicts with the firms duty to act in the best interests of their clients, for example through remuneration, sales targets or otherwise which provide an incentive for recommending or selling a particular financial instrument.

Staff who advise on or sell investment products to retail clients possess an appropriate level of knowledge and competence in relation to the products offered. In addition, all information, including marketing communications, addressed by the investment firm to clients or potential clients should be fair, clear and not misleading.

Adaptation of the legislation to technological developments: the Directive regulates the risks arising from high frequency algorithmic trading where a trading system analyses data or signals from the market at high speed and then sends or updates large numbers of orders within a very short time period in response to that analysis.

Both investment firms and trading venues should ensure robust measures are in place to ensure that algorithmic trading or high-frequency algorithmic trading techniques do not create a disorderly market and cannot be used for abusive purposes. Trading venues should also ensure their trading systems are resilient and properly tested to deal with increased order flows or market stresses and that controls are in place, such as circuit breakers, to temporarily halt trading or constrain it if there are sudden unexpected price movements.

Commodity derivatives: in order to prevent market abuses, the competent authorities, in line with the methodology for calculation determined by ESMA, establish and apply position limits on the size of a net position which a person can hold at all times in commodity derivatives traded on trading venues and economically equivalent OTC contracts.

With regard to the energy derivative contracts (petrol, charbon), a transition period is provided up to July 2020 for the application of the clearing obligation and the margining requirements established in the [Regulation \(EU\) No 648/2012](#). The Commission should, by 1 January 2018, prepare a report assessing the potential impact on energy prices and the functioning of the energy market of the expiry of the transitional period.

Cooperation: the Directive reinforces the measures concerning the exchange of information between national competent authorities as well as the reciprocal obligations of authorities for assistance and cooperation.

The competent authorities should provide each other with the relevant information for the exercise of their functions in order to detect and to prevent offences under the Directive.

Third country firms: the Directive creates a harmonised legal framework regulating the access of third country firms to the EU market. It provides that a Member State may require that a third-country firm intending to provide investment services or perform investment activities with or without any ancillary services to retail clients or to professional clients in its territory establish a branch in that Member State.

The branch shall acquire a prior authorisation by the competent authorities of that Member State in accordance with certain conditions. The requesting firm should be, among other, properly authorised, and paying due regard to any FATF recommendations in the context of anti-money laundering and countering the financing of terrorism.

ENTRY INTO FORCE: 02.07.2014.

TRANSPOSITION: 03.07.2016. The measures shall apply from 03.01.2017.

DELEGATED ACTS: the Commission may adopt delegated acts in order to achieve the objectives of the Regulation. The power to adopt delegated acts shall be conferred on the Commission for an unlimited period from 2 July 2014. The European Parliament or the Council may object to a delegated act within a period of three months from the date of notification (this period can be extended for three months). If the European Parliament or the Council make objections, the delegated act will not enter into force.
