Amendments to the Markets in Financial Instruments Directive (MiFID 2)

PURPOSE : to amend the Markets in Financial Instruments Directive (MiFID) in order to enhance market data transparency.

PROPOSED ACT: Directive of the European Parliament and of the Council.

ROLE OF THE EUROPEAN PARLIAMENT: the European Parliament decides in accordance with the ordinary legislative procedure and on an equal footing with the Council.

BACKGROUND: the MiFID/MiFIR framework is the rulebook governing participation in European capital markets. It consists of a directive (Directive 2014/65/EU, MiFID II) and a regulation (Regulation (EU) No 600/2014, MiFIR).

In 2007, MiFID I introduced competition in the market for equity trading. Later iterations of MiFID extended competition to trading in non-equity asset classes, such as bonds and derivatives. The consequence is that, when a broker or investor wants to execute an order to buy or sell an asset, they can choose from different venues, such as regulated markets (RMs), multilateral trading facilities (MTFs), dark pools, and systematic internalisers (SIs).

Today, financial instruments, such as shares and bonds, are traded in the EU across about 500 execution platforms (across all asset classes). All these platforms need to publish information about each transaction, such as the volume, time and price of the transaction. This makes the information very fragmented and only few big players are able to have a comprehensive overview of the market.

As regards data consolidation, the proposal already comprises the concept of consolidated tape meaning a centralised database that will provide easy access to consolidated market data to all investors, large and small (asset managers, pension funds, retail investors), and to financial intermediaries, such as brokers. The idea behind a consolidated tape provider (CTP) is that exchanges and alternative trading venues would send real-time data streams to an accredited CTP. This CTP would make available to the public the exact same information, at so-called reasonable cost, using identical data tags and formats.

The proposal is part of a package of measures for the CMU which also includes:

- a [legislative proposal](#) to revise the Markets in Financial Instruments Regulation (MiFIR);
- a [legislative proposal](#) to establish a European Single Access Point (ESAP);
- a [legislative proposal](#) to revise the European Long Term Investment Fund (ELTIF) Regulation;
- a [legislative proposal](#) to revise the Directive on Alternative Investment Fund Managers.

CONTENT: this proposal aims to amend the MiFID. It is strictly a complement to the proposal to amend MiFIR. It is limited on the one hand to the deletion of certain provisions in MiFID II which will become superfluous as a result of the modifications to MiFIR, and on the other hand to the creation of legal obligations for Member States to organise the supervision of rules newly set out in MiFIR.

More specifically, the proposal:

- deletes or replaces provisions in MiFID II that will become superfluous as a result of the proposed amendments to MiFIR in this package;
- removes the licensing requirement for persons dealing on own account on a trading venue by means of direct electronic access to the extent that they do not provide or perform any other investment services;
- requires Member States to oblige investment firms and market operators operating a multilateral trading facility or organised trading facility to have arrangements in place to ensure they meet the data quality standards now enacted in MiFIR;
- requires Member States to oblige regulated markets to have arrangements in place to ensure the data quality standards now enacted in MiFIR;
- requires Member States to also provide for sanctions for infringements of certain new provisions in MiFIR in relation to the reviewed volume cap mechanism, to mandatory contributions to consolidated tape providers, to the quality of data reported to consolidated tape providers as well as to payments for order flow.

Amendments to the Markets in Financial Instruments Directive (MiFID 2)

The Committee on Economic and Monetary Affairs adopted the report by Danuta Maria HÜBNER (EPP, PL) on the proposal for a directive of the European Parliament and of the Council amending Directive 2014/65/EU on markets in financial instruments.

The committee responsible recommended that the European Parliament's position adopted at first reading under the ordinary legislative procedure should amend the proposal as follows:

Systematic internaliser

The report seeks to amend Directive 2014/65/EU regarding a systematic internaliser. The Article provides that an investment firm should be considered to be a systematic internaliser only when it is deemed to perform its activities on an organised, frequent, systematic and substantial basis or when it chooses to opt-in under the systematic internaliser regime. The quantitative criteria, related to the transaction reporting role of systematic internalisers, have led to a significant increase in the number of systematic internalisers in the Union and in the regulatory burden both on ESMA, which is required to assess the quantitative criteria for investment firms that qualify as systematic internalisers, and on investment firms themselves. In particular, the regulatory burden disproportionately affects smaller investment firms, which would benefit from a lighter and more flexible regime. Directive 2014/65/EU should therefore limit the systematic internaliser regime to investment firms that meet the qualitative criteria or investment firms that choose to opt-in to the systematic internaliser regime.

Clarification of best execution

Directive 2014/65/EU contains an article on the obligation to execute orders on terms most favourable to the client (best execution). However,

different interpretations of that article by national competent authorities have led to widely diverging application of best execution requirements and of market practice supervision. Therefore, the report proposes to clarify best execution requirements for professional clients. ESMA should develop draft regulatory technical standards on the criteria that should be taken into account for the purpose of defining and assessing the order execution policy.

Market volatility

Directive 2014/65/EU contains rules that require trading venues to implement mechanisms designed to limit excessive volatility in the markets, notably trading halts and price collars. However, the extreme circumstances that energy and commodity derivatives markets have experienced throughout the energy crisis of 2022 have led to a very low number of activations of those mechanisms and have shown that there is a lack of transparency around the activation of those mechanisms by the relevant trading venues in the Union.

The report calls for further information and more transparency on the circumstances that lead to trading being halted and on the main principles for establishing the technical parameters connected to the activation of those mechanisms. In addition, ESMA should consider to what extent the level of discretion left to trading venues regarding to the activation of those mechanisms should be reduced.

In addition, national competent authorities should carefully monitor the use of those mechanisms by trading venues and make use of their supervisory powers as appropriate.

Commodity derivatives markets

ESMA should consider that commodity derivatives markets play an important role in ensuring that market participants can properly risk manage the necessary investments for the energy transition. The report highlights the importance of setting the right parameters to ensure that the Union has competitive liquid commodity derivatives markets that ensure the strategic autonomy of the Union, while preventing market abuse and supporting orderly pricing and settlement conditions.
