

Rail transport statistics: collection of data on goods, passengers and accidents

2013/0297(COD) - 06/01/2014 - Committee report tabled for plenary, 1st reading/single reading

The Committee on Transport and Tourism adopted the report by Michael CRAMER (Greens/EFA, DE) on the proposal for a regulation of the European Parliament and of the Council amending Regulation (EC) No 91/2003 of the European Parliament and of the Council of 16 December 2002 on rail transport statistics, as regards the collection of data on goods, passengers and accidents.

The parliamentary committee recommended that the position of the European Parliament adopted at first reading under the ordinary legislative procedure modify the Commission proposal as follows.

Extension of data collection: the Members took the view that data collection should be extended in relation to rail infrastructure, such as for example:

- the number of kilometres of rail infrastructure, equipped with the European Rail Traffic Management System(ERTMS) system;
- the number of cross-border rail infrastructure points, used more frequently for passenger transport than every hour, than every two hours and less frequently than every two hours;
- the number of cross-border rail points, abandoned for use of passengers or freight transport or dismantled rail infrastructure;
- the number of stations, barrier-free, accessible for persons with reduced mobility (PRMs) and disabled persons.

The report proposed adding some categories of data such as distance-based rail freight modal shares based on distance, in tonnes by kilometre, the number of locomotives equipped with the ERTMS system or the number of new and retro-fitted silent freight wagons equipped with composite brake blocks.

Data on accidents and incidents: the requirement to collect data on accidents should remain with Eurostat and the European Rail Agency. Eurostat should closely cooperate with the European Railway Agency in the collection of rail accident data in order to ensure that the data obtained are consistent and fully comparable. Moreover, a requirement to collect data on incidents is proposed, since this contributes to a higher level of rail safety.

Delegated powers: Members were of the opinion that there is a need for streamlining the powers delegated to the Commission to safeguard the Parliaments prerogatives.

The power to adopt delegated acts shall be conferred on the Commission for a period of five years (renewable) from the date of the entry into force of the amending Regulation.

When preparing and drawing up delegated acts, the Commission should consult the rail sector.

Report: within three years after the date of entry into force of this Regulation and every three years thereafter, the Commission shall submit a report on the implementation of this Regulation. The report shall assess the quality of the statistics produced, especially with regards to data losses, resulting from the deletion of simplified reporting.
